1.0 Model Name

1.1 Product Name Description

No.	Description	Generic Model Name	ACSON Brand
1	Wall Mounted Fan Coil Unit	WM / 5WM	AWM / A5WM
2	Wall Mounted AC Inverter Fan Coil Unit	WMV	AWMV
3	Wall Mounted DC Inverter Fan Coil Unit	5WMX	A5WMX
4	Wall Mounted DC Inverter-Y Fan Coil Unit	5WMY	A5WMY
4	Ceiling Exposed Fan Coil Unit	CE / 5CE	RCM / R5CM
5	Ceiling Cassette Fan Coil Unit	CK / 5CK	ACK / A5CK
6	Ceiling Concealed Fan Coil Unit	CC / 5CC	ACC / A5CC
7	Ducted Split Blower Unit	SB	ADB
8	Chilled Water Fan Coil Unit	CW	ACW
9	Water Source Heatpump Split Unit	WSS / 5WSS	AWSS / A5WSS
10	Horizontal Water Source Heatpump Unit	WH	AWH
11	Air Cooled Mini Chiller	AC / 4AC / 5AC	AMAC / A4MAC / A5MAC
12	Single Split Condensing Unit	SL / 4SL / 5SL	ALC / A4LC / A5LC
13	Single Split AC Inverter Condensing Unit	SLV	ALCV
14	Single Split DC Inverter Condensing Unit	5SLX	A5LCX
15	Single Split DC Inverter Condensing Unit	5SLY	A5SLY
15	Modular Split Condensing Unit	MSS / 4MSS	AMC / A4MC
16	Multi Split Series	MSD / 4MSD MST / 4MST MSH	AMSD / A4MSD AMST / A4MST AMSH
17	Multi Split AC Inverter Condensing Unit	MSV	AMSV
18	Multi Split DC Inverter Condensing Unit	5MSX	A5MSX
19	Multi Split DC Inverter Condensing Unit	5MSY	A5MSY
20	Multi Digital Scroll Units	MDS/ 5MDS	AMDS/ A5MDS
21	Horizontal Condensing Unit	HDC / 5HDC	AHDC / A5HDC
22	Vertical Condensing Unit	VCU	AVCU
23	Air Cooled Roof Top Packaged Air Conditioner	RT / 4RT	ART / A4RT
24	Air Cooled Inverter Mini Chiller	5ACV	A5ACV

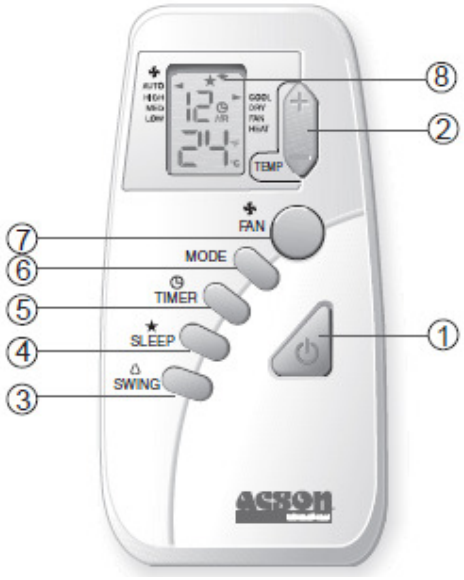
5.0 Handset Operating Guide

5.1 G6

Outlook



Operation Guide

1. “ON/OFF” Switch
   - Press to start the air conditioner unit.
   - Press again to stop the unit.

2. Temperature Setting
   - Set the desire room temperature.
   - Press button to increase or decrease the set temperature. Setting range are between 16℃ to 30℃ setting (60℉ to 80℉) (Optional setting from 20℃ to 30℃).
   - Press ▲ or ▼ button simultaneously will toggle the temperature setting between ℃ and ℉.

3. Automatic Air Swing
   - Press the button to activate the automatic air swing function. The swing angle ranging from horizontal to 25° to bottom.

4. “SLEEP” MODE
   - Press the button to activate sleep mode. This mode can only be activated while in cooling or heating mode operation. If it is activated in “COOL” mode, the set temperature will be increase 0.5℃ after 30 minutes, 1℃ after 1 hour and 2℃ after 2 hours. Whereas in “HEAT” mode, the set temperature will decrease by 1℃ after 30mins, 2℃ after 1 hour and 3℃ after 2 hours.
   - This function is available under COOL, HEAT & AUTO mode.

5. Timer Setting
   - Press set button to activate the timer setting (from 1 hour to 15 hour) of the air conditioning unit. It will be in “On” or “Off” condition after the set time depending to the current condition (either from “On” to Off” or vise versa)
   - To cancel the timer setting, press the button continuously until the timer display goes off.

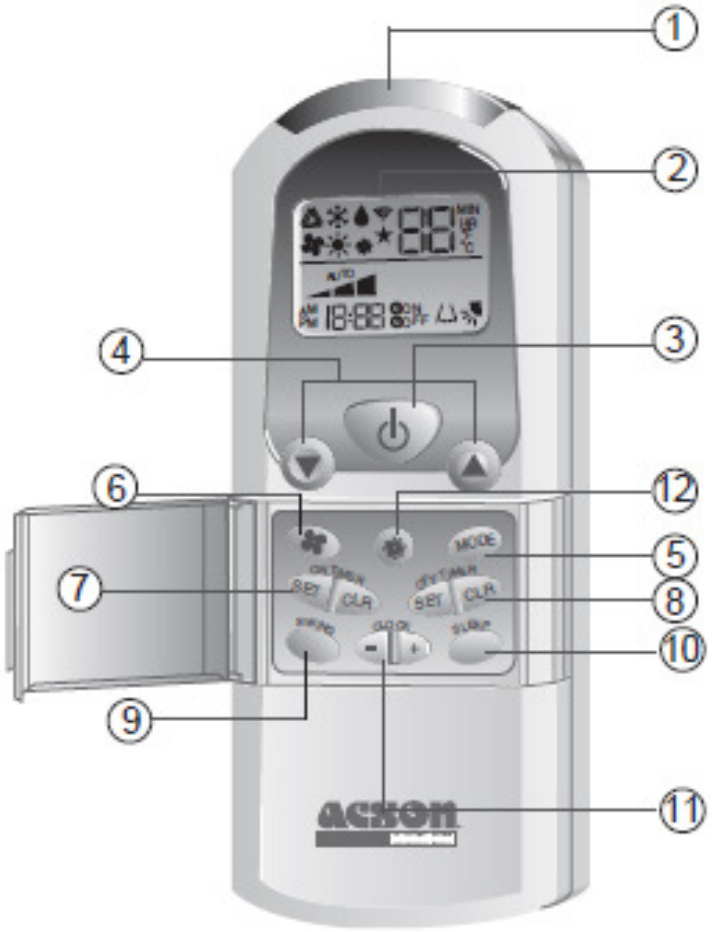
6. Operation Modes
   - Press the “mode” button for select the type of operating mode.
   - Cooling only unit:
     Cool → Dry → Fan.
   - Heatpump unit:
     Auto → Cool → Dry → Fan → Heat

7. Fan Speed and Ventilation Mode Selection
   - Press the button until the desired fan speed is achieved.

8. Signal Transmission Indication
   - Blink to confirm the last setting has been send to the unit.

5.2 G8

Outlook



Operation Guide

1. Transmission Source
   - The source where the signal will be transmitted.

2. Signal Transmission Indication
   - Blink to confirm the last setting has been send to the unit.

3. On/Off Button
   - Press once to start the air conditioner.
   - Press again to stop the unit.

4. Temperature Setting
   - To set the desired room temperature, press the button to increase or decrease the set temperature.
   - The temperature setting range is from 16℃ to 30℃ (Optional setting 18℃ to 30℃).
   - Press both buttons simultaneously to toggle the temperature setting between ℃ and ℉.

5. Operation Mode
   - Press the MODE button to select the type of operating mode.
   - For cooling only unit, the available modes are: COOL, DRY & FAN.
   - For heat pump unit, the available modes are: AUTO, COOL, DRY, FAN & HEAT.

6. Fan Speed Selection
   - Press the button until the desired fan speed is achieved.

7. On Timer Setting
   - Press the SET button will activate the on timer function.
   - Set the desired on time by pressing the SET button continuously. If the timer is set to 7.30am, the air conditioner will turn on at 7.30 sharp.
   - Press the CLR button to cancel the on timer setting.

8. Off Timer Setting
   - Press the SET button will activate the off timer function.
   - Set the desired off time by pressing the SET button continuously.
   - Press the CLR button to cancel the off timer setting.

9. Automatic Air Swing (Optional)
   - Press the SWING button to activate the automatic air swing function.
   - To distribute the air to a specific direction, press the SWING button and wait until the louver move to the desired direction and press the button once again.

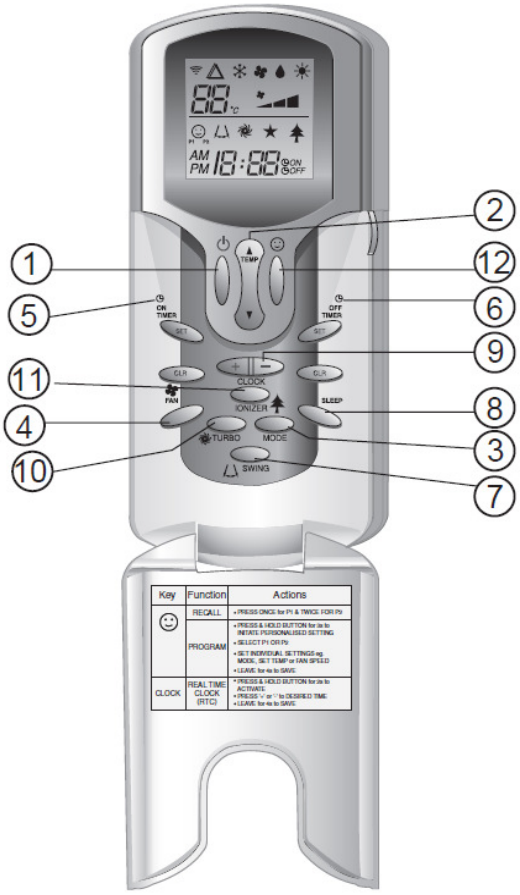
10. Sleep Mode Setting
   - Press the button to activate sleep mode. This function is available under COOL, HEAT & AUTO mode.
   - When it is activated in COOL mode, the set temperature will be increased 0.5℃ after 30mins, 1℃ after 1 hour and 2℃ after 2 hours.
   - When it is activated in HEAT mode, the set temperature will be decreased 1℃ after 30mins, 2℃ after 1 hour and 3℃ after 2 hours.

11. Clock Time Setting
   - Press button + or - to increase or decrease the clock time.

12. Turbo Function (Optional – Only Applicable To Inverter Unit)
   - Press button for fast cooling or heating operation.
   - The temperature will be increased internally if it is in the HEAT mode, decreased if in COOL or DRY mode. Fan speed will be increased if it is not at maximum speed.
   - The temperature & fan speed will resume to user setting if the button is pressed again or after 20mins.
   - Available under HEAT, COOL & DRY modes only.

5.3 G12

Outlook



Operation Guide

1. “ON/OFF” Button
   - Press once to start the air conditioner unit.
   - Press again to stop the unit.

2. Temperature Setting
   - To set the desired room temperature, press ▲ the button to increase or ▼ button to decrease then set temperature.
   - The temperature setting range is from 16℃ to 30℃.
   - Press both buttons simultaneously to toggle and from ▲ ℃ to▼ ℉ setting.

3. Operation Mode
   - Press the MODE button to select the type of operating mode.
   - For cooling only unit, the available modes are: COOL (❄), DRY (💧) and FAN (✣).
   - For heat pump unit, the available modes are: AUTO, COOL (❄), DRY (💧), FAN (✣) and HEAT (☀).

4. Fan speed selection
   - Press the button continuously will toggle the fan speed in the following order: Low (▁) ——: Med (▁▃) ——: High (▁▃▅) ——: Auto
   - Stop pressing when the desired fan speed appears on the display screen.

5. ON Timer Setting
   - Press the SET button will activate the on timer function.
   - Set the desired on time by pressing the SET button continuously. If the timer is set to 7.30am, the air conditioner will turn on at 7.30am sharp.
   - Press the CLR button to cancel the on timer setting.

6. OFF Timer Setting
   - Press the SET button will activate the off timer function.
   - Set the desired off time by pressing the SET button continuously.
   - Press the CLR button to cancel the off timer setting.

7. Automatic Air Swing
   - Press the SWING (⟳) button to activate the automatic air swing function.
   - To distribute the air to a specific direction, press the SWING button and wait until the louver move to the desired direction and press the button once again.

8. Sleep Mode Setting
   - Press the **SLEEP** button will activate the sleep mode function. This function is available under COOL, HEAT and AUTO mode.
   - When the unit is operating under cooling mode, the set temperature is increased by 0.5℃ after 30 minutes, 1℃ after an hour, and 2℃ after 2 hours.
   - When the unit is operating under heating mode, the set temperature is decreased by 1℃ after 30 minutes, 2℃ after an hour and 3℃ after 2 hours.

9. Clock Time Setting
   - Press + button to increase the clock time.
   - Press – button to decrease the clock time.

10. Turbo Mode
   - Press the TURBO () button to achieve the required set temperature in a short time.

11. Ionizer
   - Press the Ionizer () button to activate the negative Ion function, which will refresh the indoor air effectively.

12. Personalize Setting
   - Press ☺ button and hold for 3s to initiate personalized setting
   - Set the individual setting e.g. MODE, SET TEMP or FAN SPEED and leave for 4s to save the setting into the program.
   - 2 groups of settings are allowed to store in the handset. Press once to activate the P1 setting, press again to cycle between P1 and P2.
   - Press any key to deactivate the personalize setting.

5.3 G18

Outlook

Operation Guide

1. Transmission Source
    - The source where the signal will be transmitted.
2. Signal Transmission Indication
    - Blink to confirm that the last setting has been transmitted to the unit.

3. Temperature Setting
    - To set the desired room temperature, press the ▲ or ▼ button to increase or decrease the set temperature.
    - Temperature setting range is from 16℃ to 30℃ (optional setting 20℃ to 30℃).

4. Personalize Setting
    - Press and hold for 3s, then P1 will blink. Press again to cycle between P1 and P2.
    - Set the desire setting, then leave the handset for 4s without pressing any key and it will save the setting into the program.
    - Press once to activate the P1 setting, press again to cycle between P1 and P2.
    - Press any key to deactivate the personalize setting.

5. Automatic Air Swing (optional)
- Press the SWING button to activate the automatic air swing function.
- To distribute the air to a specific direction, press the SWING button and wait until the louver move to the desired direction and press the button once again.

6a. Silent Function (For WM – J Series only)
- Press for quiet operation.
- Fan speed turn to minimum speed.
- Press again to deactivate the function.

6b. Ionizer Function (For WM - G series only)
- Press button to activate the negative ion function, which will refresh the indoor air effectively.

7. Sleep Mode Setting
- Press the SLEEP button will activate the sleep mode function. This function is available under COOL, HEAT and AUTO mode.
- When the unit is operating under cooling mode, the set temperature is increased by 0.5℃ after 30 minutes, 1℃ after an hour, and 2℃ after 2 hours.
- When the unit is operating under heating mode, the set temperature is decreased by 1℃ after 30 minutes, 2℃ after an hour, and 3℃ after 2 hours.

8. Operating Mode
- Press the MODE button to select the type of operating mode.
- For cooling only unit, the available modes are: COOL ( ), DRY ( ) and FAN ( ).

9. Fan Speed Selection
- Press the button continuously will toggle the fan speed in the following order:
  Low → Med → High → Auto
- Stop pressing when the desired fan speed appears on the display screen.

10. “ON/OFF” Button
- Press one to start the air conditioner unit.
- Press again to stop the unit.

11. Timer Cancel
- Press the TIMER CANCEL button to cancel the on timer setting.

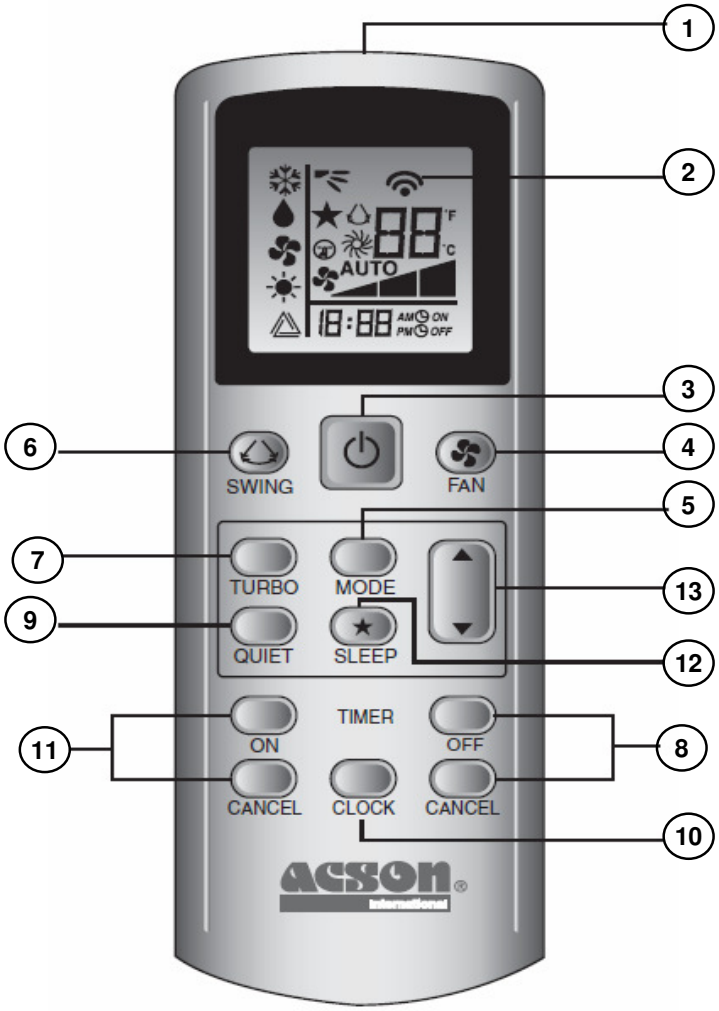
12. OFF Timer Setting
- Press the OFF TIMER button will activate the off timer function.
- Set the desired off time by pressing the OFF TIMER button continuously.

13. ON Timer Setting
- Press the ON TIMER button will activate the on timer function.
- Set the desired on time by pressing the ON TIMER button continuously. If the timer is set to 7.30am, the air conditioner will turn on at 7.30am sharp.

14. Turbo Function
- Press for fast cooling.
- Fan speed turn to maximum speed.
- Press again to deactivate the function.

15. Clock Time Setting
- Press and hold to set the clock time.

5.4 GS02



Operation Guide

1. Transmission Source
   - The source where the signal will be transmitted.

2. Signal transmission indication
   - Blink to confirm that the last setting has been transmitted to the unit.

3. ON/OFF Button
   - Press once to start the air conditioner unit.
   - Press again to stop the unit.

4. Fan Speed selection
   - Press the button continuously will toggle the fan speed in the following order:

Low ⟶ Med ⟶ High ⟶ Auto

   - Stop pressing when the desired fan speed appears on the display screen.

5. Operation mode
   - Press the MODE button to select the type of operating mode.
   - For cooling only unit, the available modes are: COOL, DRY and FAN.
   - For heat pump unit, the available modes are: AUTO , COOL, DRY, FAN and HEAT.
   - The AUTO mode is unavailable for chilled water system.
   -

6. Automatic air swing
   - Press the SWING button to activate the automatic air swing function.
   - To distribute the air to a specific direction, press the SWING button and wait until the louver move to the desired direction and press the button once again.

Swing mode selection method (for CK-E model)
   - Press SWING button for 4 seconds to enter field setting mode. While in field setting mode, it will only show SWING MODE.
   - Press temperature and button to select SWING MODE rotation from Swing Mode 1 to Swing Mode 3.
   - There are 3 different SWING MODE, which are:

     Swing mode 1 Swing mode 2 Swing mode 3

     SWING MODE will not activate unless SWING is activated.
     Swing is indicated by the logo:
   - If no mode changes within 4 seconds, unit will operate according to the selected SWING MODE.

7. Turbo function (model dependent)
   - Press for fast cooling or heating operation.
   - Fan speed turn to maximum speed.
   - Press again to deactivate the function.
   - Available under HEAT, COOL and DRY modes only.
   - Any change of fan speed will deactivate this function.
   - The Turbo function is unavailable for chilled water system and remote control with SWING MODE function.
   -

8. OFF timer setting
   - Press the OFF TIMER CANCEL button will activate the off timer function.
   - Set the desired off time by pressing the OFF TIMER CANCEL button continuously.
   - Press the CANCEL button to cancel the off timer setting.

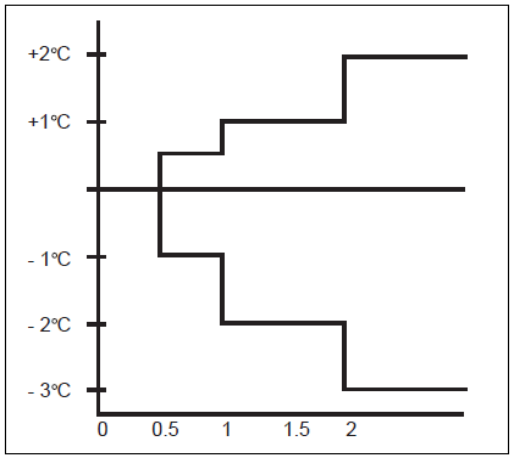
9. Quiet function (model dependant)
   - Press for quiet operation.
   - Fan speed turn to minimum speed.
   - Press again to deactivate the function.
   - Any change of fan speed will deactivate this function.
   - The Silent function is unavailable for chiller water system.
   -

10. Clock time setting
   - Press and hold button to set the clock time.

11. ON timer setting
   - Press the ON TIMER CANCEL button will activate the on timer function.
   - Set the desired on time by pressing the ON TIMER CANCEL button continuously. If the timer is set to 7.30am, the air conditioner will turn on at 7.30am sharp.
   - Press the CANCEL button to cancel the on timer setting.

12. Sleep mode setting

- Press the ★ button will activate the sleep mode function.
- This is an energy saving option. When the unit is operating under cooling mode, the set temperature is increased by 0.5℃ after the first half an hour, another 0.5℃ after the second half an hour and 1℃ after the following 1 hour.
- When the unit is operating under heating mode, the set temperature is decreased by 1℃ after the first half an hour, another 1℃ after the second half an hour and 1℃ after the following 1 hour.
- This function is available under **COOL**, **HEAT** and **AUTO** mode.



13. Temperature setting

- To set the desired room temperature, press the ▲ or ▼ button to increase or decrease the set temperature.
- The temperature setting range is from 16℃ to 30℃ (Optional setting 20℃to 30℃).
- Press both buttons ▲ and ▼ simultaneously to toggle from ℃ to ℉ setting.

5.5 APJ2

Operation Guide

1. Transmission Source
   - The source where the signal will be transmitted.

2. LCD Display
   - It displays the current settings.
   - (In this illustration, each section is shown with its displays on for the purpose of explanations)

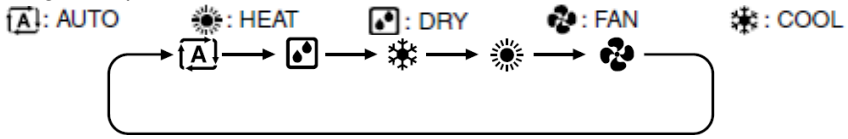
3. ECONO button
   - ECON operation is a function which enables efficient operation by limiting the maximum power consumption value.
   - This function is useful for cases which attention should be paid to ensure a circuit breaker will not trip when the product runs along side other appliances.
   - Press ECONO button to start ECONO operation. The symbol is displayed on the LCD.
   - Press ECONO button to cancel ECONO operation. The symbol button disappears from the LCD.

4. POWERFUL Button
- POWERFUL operation quickly maximizes the cooling (heating) effect in any operation mode.
- To start POWERFUL operation, press POWERFUL. POWERFUL operation ends in 20 minutes. Then the system automatically operates again with the previous settings which were used before POWERFUL operation. is displayed on the LCD.
- To cancel POWERFUL operation, press POWERFUL button again. disappears from the LCD.

5. Temperature Settings.
- It changes the temperature settings.

6. ON/ OFF button
- Press this button once to start operation. Press again to stop it.

7. Mode Selector Button
- It selects the operation mode (AUTO/ DRY/ COOL/ HEAT/ FAN).
- Press MODE button to select operation mode. Each pressing of the button advances the mode setting in sequence.



8. FAN Operation
- To select the airflow rate setting.
- 5 levels of airflow rate setting from to plus & are available.
- When the airflow is set to , the noise from the indoor unit will become quieter.

9. SWING Operation
- To adjust the airflow direction
- To start auto swing, press SWING button and the symbol is displayed on the LCD.
- The flap (horizontal blade) will begin to swing.
- To set the flap at desired position, press SWING button when the flap has reached the desired position. The flap will stop moving. The symbol disappeared from the LCD.

10. COMFORT AIRFLOW Operation
- When COMFORT is enable, the flow of air will be upward direction while in COOL operation and in the downward direction while in HEAT operation, which will provide a comfortable wind that will not come in direct contact with people.
- To start COMFORT AIRFLOW operation, press COMFORT button. The flap will change, preventing air from blowing directly on the occupants of the room. The symbol is displayed on the LCD.
- Air flow rate is set to AUTO. COOL/ DRY: The flap will go up. HEAT: The flap will go down.
- To cancel COMFORT AIRFLOW operation, press COMFORT button again. The flap will return to the memorized position before the COMFORT AIRFLOW operation.
- The symbol will disappear from the LCD.

11. ON TIMER Operation

- To use ON TIMER operation, press ON button.
- HR. ON is displayed on the LCD. Each pressing of ON advances the time setting by 1 hour. The timer can be set between 1 to 12 hours.
- To cancel ON TIMER operation, press CANCEL button. HR. ON will disappear from the LCD.

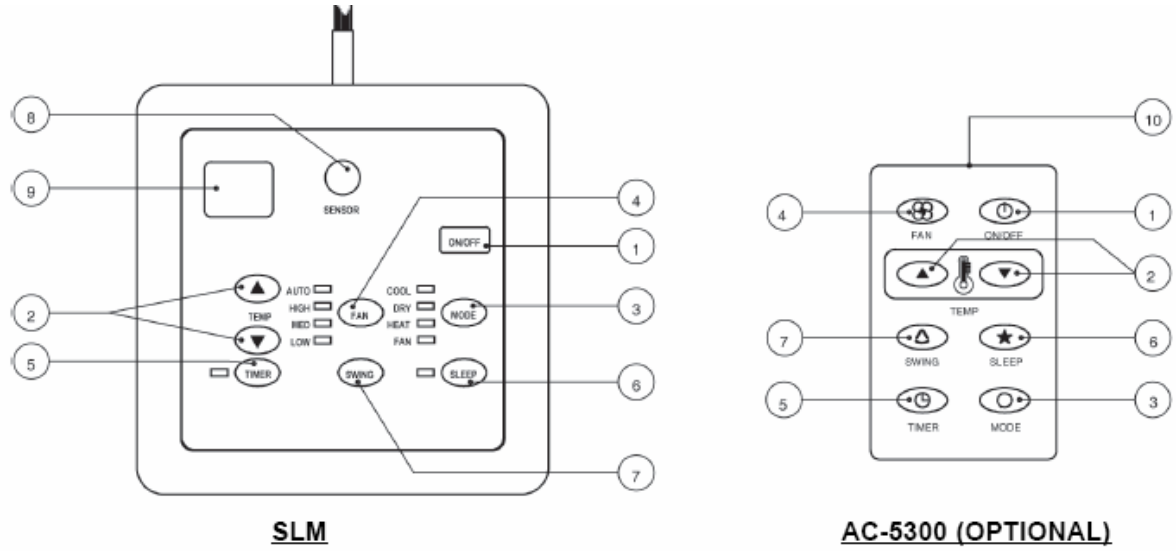
12. OFF TIMER Operation

- To use OFF TIMER operation, press OFF button.
- HR. OFF is displayed on the LCD. Each pressing of OFF advances the time setting by 1 hour. The timer can be set between 1 to 9 hours.
- To cancel OFF TIMER operation, press CANCEL button. HR. OFF will disappear from the LCD.

13. CANCEL Button

- It cancels the timer setting.

5.6 SLM3



SLM AC-5300 (OPTIONAL)

Operation Guide

1. “ON/OFF” Switch
   - Press to start the air conditioner unit.
   - Press again to stop the unit.

2. Temperature Setting
   - Set the desired room temperature.
   - Press button to increase or decrease the set temperature.
   - Setting range are between 16℃ to 30℃ (60℉ to 80℉).

3. Operation Modes
   - Press the “mode” button for select the type of operating mode.
     - Cooling Only:
       COOL, DRY, FAN
     - Heat Pump:
       AUTO, COOL, DRY, HEAT, FAN
       (AUTO mode is represented by both COOL and HEAT LED light on)

4. Fan Speed Selection
   - Press the button until the desired fan speed is achieved.

5. Timer
   - Press the set button to select the switch timer of the air conditioner unit (the setting range is between1 to 10 hours).

6. “SLEEP” Mode
   - Press button to activate the sleep function. This function can only be activated under “cool” or heating mode operation. When it is activated under “cool” mode operation, the set temperature will increase 0.5℃ after 30 minutes, 1℃ after 1 hour and 2℃ after 2 hours. If it is activated under “HEAT” mode operation, the set temperature will be decreased 0.5℃ after 30 minutes, 1℃ after 1 hour and 2℃ after 2 hours.

7. Air Swing
   - Press button to activate the automatic air swing function.

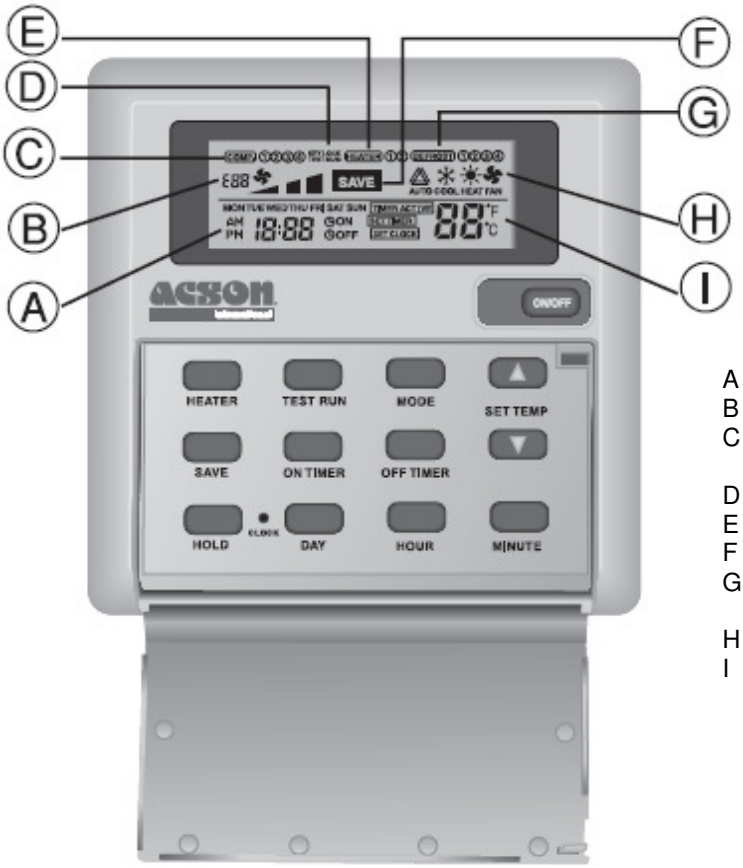
8. Sensor
   - Infra red sensor to receive signals from wireless controller.

9. LED Display
   - To display the set temperature (in ℃) and timer delay setting (in hours).

10. Transmission Source
    - To transmit signals to the air conditioner.

5.7 Sequential Controller

Outlook



A : Time display
B : Error indication
C : Compressor running display (up to 4 compressors)
D : Key lock display
E : Heat display (up to 2 heaters)
F : Energy saving mode display
G : Compressor deforst cycle display (up to 4 compressors)
H : Operation mode display
I : Temperature set display

Operating Guide

1. "ON/OFF" Switch
   - Press once to start the air conditioning unit.
   - Press again to stop the unit.
   - The operation lamp next to the key lights up and goes off respectively when the unit is running or not running.
   - *Caution:* In the case when the ***ON/OFF*** key is pressed immediately after the operation is stopped, the unit will not restart until 3 minutes later to protect the compressor.

2. Selecting Operating Mode
   - Press the ***MODE*** key to select the type of operating mode. Consecutive press of the key switches the operation over "*COOL*", "*HEAT*", "*AUTO*" and "*FAN*"

3. SAVE Mode
   - Press the ***SAVE*** key to select the energy saving function. This option is only available for "*COOL*", "*HEAT*" and "*AUTO*" modes.

4. Auxiliary Electric Heater
   - If the "*HEAT*" mode provides insufficient heating to a room even at the highest temperature setting (30℃), press the **HEATER** key to activate the auxiliary electric heater. For models with two heaters, consecutive press of the key allows the selection of one or both heaters active.

5. Temperature Setting
   - To set the desired room temperature, press ▲ or ▼ to increase or decrease the set temperature in the range of 16℃ to 30℃.
   - Press both ▲ and ▼ simultaneously to toggle between ℃ and ℉ setting.

6. Time Setting

Real time clock

- Press the ***CLOCK*** key once to activate set clock mode.
- Press again to disable set clock mode.
- Under set clock mode, the time of the present day can be set by pressing the respective ***MINUTE***, ***HOUR*** and ***DAY*** key.

7 days timer

- Press the ***ON TIMER*** key to activate autoON timer mode. Under this mode, press the respective ***MINUTE***, ***HOUR*** and ***DAY*** key to select the time of the week when the air-conditioning unit is to automatically start running. Press ***ON TIMER*** key again to save the setting.
- Press the ***OFF TIMER*** key to activate autoOFF timer mode. Under this mode, press the respective ***MINUTE***, ***HOUR*** and ***DAY*** key to select the time of the week when the air-conditioning unit is to automatically stop running. Press the ***ON TIMER*** key again to save the setting.
- Then to activate the 7 days timer, press and hold the ***TIMER ACTIVE*** key until the word "TIMER ACTIVE" appears on the LCD screen. Repeat the same step to disable the 7 days timer.

7. Other Function

Key Lock

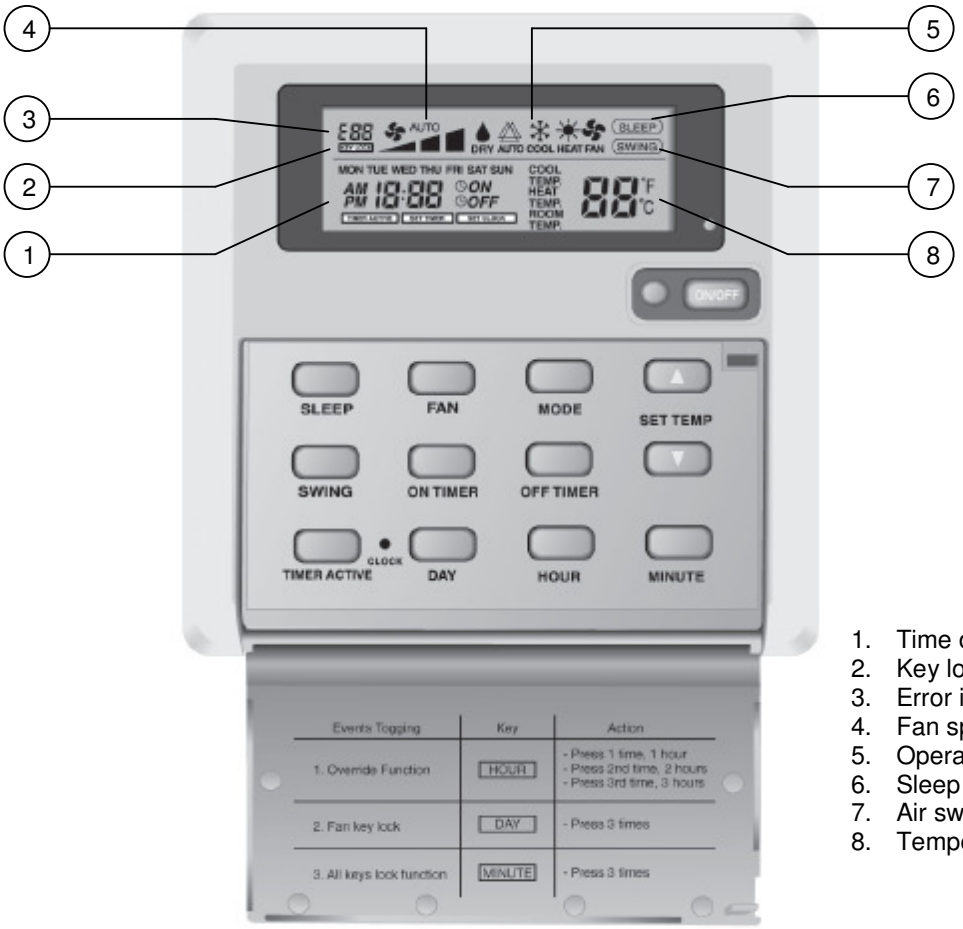
- Press the ***MINUTE*** key 3 times consecutively to activate the key lock. A "KEY LOCK" symbol will appear on the LCD screen. At this point, only the ON/OFF key is valid.
- To disable the key lock, again press the MINUTE key 3 times consecutively.

Test Run

- Press the ***TEST RUN*** key 2 times consecutively to test run the unit.

5.8 Netware 3

Outlook



1. Time display
2. Key lock display
3. Error indication
4. Fan speed display
5. Operation mode display
6. Sleep mode display
7. Air swing display
8. Temperature set display

Operating Guide

1. “ON/OFF” Switch
   - Press once to start the air conditioning unit.
   - Press again to stop the unit.
   - The operation lamp next to the key lights up and goes off respectively when the unit is running or not running.
   - *Caution:* In the case when the ***ON/OFF*** key is pressed immediately after the operation is stopped, the unit will not restart until 3 minutes later to protect the compressor.

2. Selecting Operating Mode
   - Press the ***MODE*** key to select the type of operating mode. Consecutive press of the key switches the operation over "*COOL*", "*HEAT*", "*AUTO*", "*DRY*" and "*FAN*"

3. Fan Speed Selection
   - Press the ***FAN*** key until the desired fan speed is achieved.

4. Sleep Mode Setting
   - Press the ***SLEEP*** key to activate sleep mode. This function is available under *COOL*, *HEAT* & *AUTO* mode.
   - When it is activated in *COOL* mode, the set temperature will be increased 0.5℃ after 30mins, 1℃ after 1 hour and 2℃ after 2 hours.
   - When it is activated in *HEAT* mode, the set temperature will be decreased 1℃ after 30mins, 2℃ after 1 hour and 3℃ after 2 hours.

5. Temperature Setting
   - To set the desired room temperature, press ▲ or ▼ to increase or decrease the set temperature in the range of 16℃ to 30℃.
   - Press both ▲ and ▼ simultaneously to toggle between ℃ and ℉ setting.

6. Air Swing
   - Press the ***SWING*** key to activate the automatic air swing function.

7. Time Setting

   Real time clock
   - Press the ***CLOCK*** key once to activate set clock mode.
   - Press again to disable set clock mode.
   - Under set clock mode, the time of the present day can be set by pressing the respective ***MINUTE***, ***HOUR*** and ***DAY*** key.

   7 days timer
   - Press the ***ON TIMER*** key to activate autoON timer mode. Under this mode, press the respective ***MINUTE***, ***HOUR*** and ***DAY*** key to select the time of the week when the air-conditioning unit is to automatically start running. Press ***ON TIMER*** key again to save the setting.
   - Press the ***OFF TIMER*** key to activate autoOFF timer mode. Under this mode, press the respective ***MINUTE***, ***HOUR*** and ***DAY*** key to select the time of the week when the air-conditioning unit is to automatically stop running. Press the ***ON TIMER*** key again to save the setting.
   - Then to activate the 7 days timer, press and hold the ***TIMER ACTIVE*** key until the word "TIMER ACTIVE" appears on the LCD screen. Repeat the same step to disable the 7 days timer.

8. Other Function

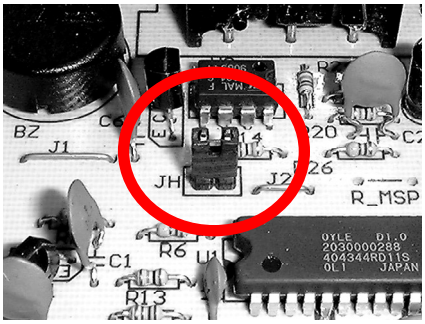
   Key Lock
   - Press the ***MINUTE*** key 3 times consecutively to activate the key lock. A "KEY LOCK" symbol will appear on the LCD screen. At this point, only the ON/OFF key is valid.
   - To disable the key lock, again press the MINUTE key 3 times consecutively.

6.0 Controller Configuration

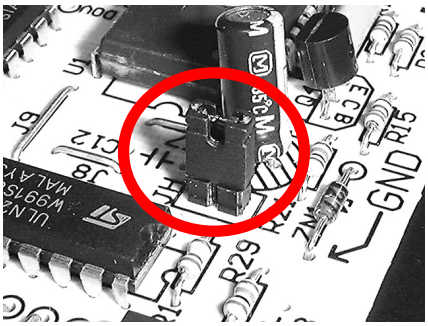
6.1 Auto Random Restart

- Shorted at JH/JP1/J_LST jumper at main board for auto restart (supplied).
- Remove the jumper to have non-auto restart.

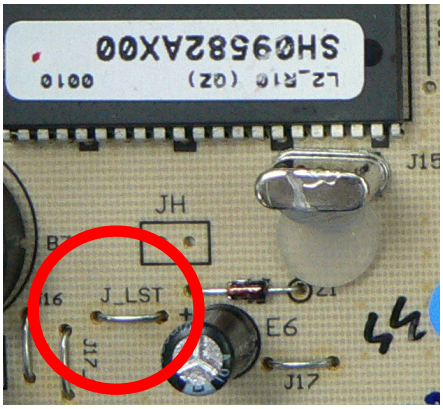
D2.0



U1.5 / SQ2.0



L2.2 / L208A / LWS / W2

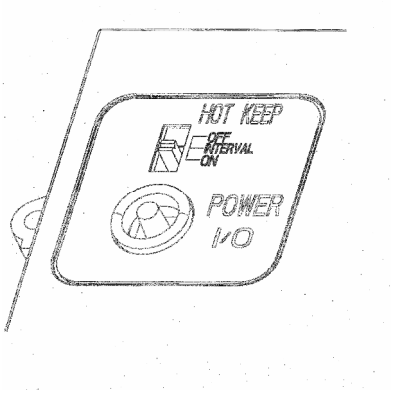


6.2 Hot Keep Selection

Three selections available:

a. Fan stop if indoor coil temperature < 30℃ (OFF).
b. Fan runs at low speed if indoor coil temperature < 30℃ and stop if indoor coil temperature < 18℃ (ON).
c. Cycle of low fan running for 30s and fan off for 120s and repeat (INTERVAL).

WM – F/FR (U1.5 & L2EF)
3 selections available at the slide switch on the On/Off Switch Board; Preset at OFF.



Other models (U1.5)
At CN3 location on the PCB,

i. Remove the connector to have (b) Fan ON and
ii. Cut off the big resistor (12kOhm) to have (c) Fan INTERVAL

Non-ducted Model – standard setting is (a) Fan OFF
Ducted Model – standard setting is (C) Fan INTERVAL

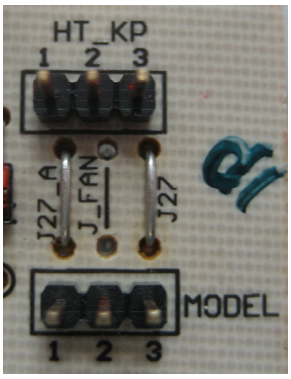
L2 Models

Two selections are available:
a. Fan ON:
- If the indoor coil temperature > 40℃, the indoor fan will run at speed.
- If the indoor coil temperature crosses 37℃, the indoor fan willrun at low speed.
- if the indoor coil temperature <18℃, the indoor fan will stop.

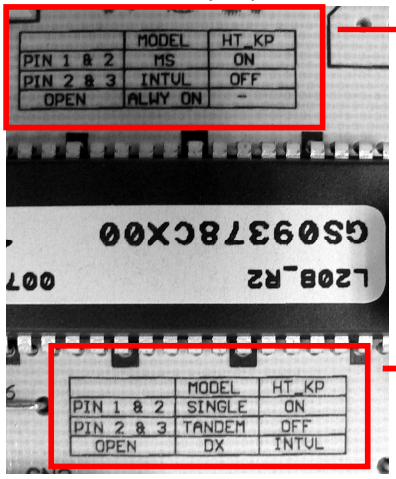
b. Fan OFF
- If the indoor coil temperature >40℃, the indoor fan will run at set speed.
- If the indoor coil temperature crosses 37℃, the indoor fan willrun at low speed.
- If indoor coil temperature <30℃, the indoor fan will stop.

L208A / LWS2.0 models

There are 2 tables setting for HT_KP & MODEL jumpers as shown as below.



HT_KP & MODEL Jumpers



For L208A jumper setting

	MODEL	HT_KP
Pin 1&2	MS	ON
Pin 2&3	INTVL	OFF
Open	ALWY ON	-

For LWS2.0 jumper setting

	MODEL	HT_KP
Pin 1&2	Single	ON
Pin 2&3	Tandem	OFF
Open	DX	INTVL

Software	Type	Jumper	Hotkeep Selection				
			Fan On	Fan Off	Interval	Always On	Multisplit
LWS2.0	Tandem WSHP	MODEL	Pin 2 & 3	Pin 2 & 3	Pin 2 & 3	X	X
		HT_KP	Pin 1 & 2	Pin 2 & 3	Open	X	X
	Single WSHP	MODEL	Pin 1 & 2	Pin 1 & 2	Pin 1 & 2	X	X
		HT_KP	Pin 1 & 2	Pin 2 & 3	Open	X	X
	DX	MODEL	Open	Open	Open	X	X
		HT_KP	Pin 1 & 2	Pin 2 & 3	Open	X	X
L208A	DX	MODEL	Open	Open	Pin 2 & 3	Open	Pin 1 & 2
		HT_KP	Pin 1 & 2	Pin 2 & 3	Open	Open	Open

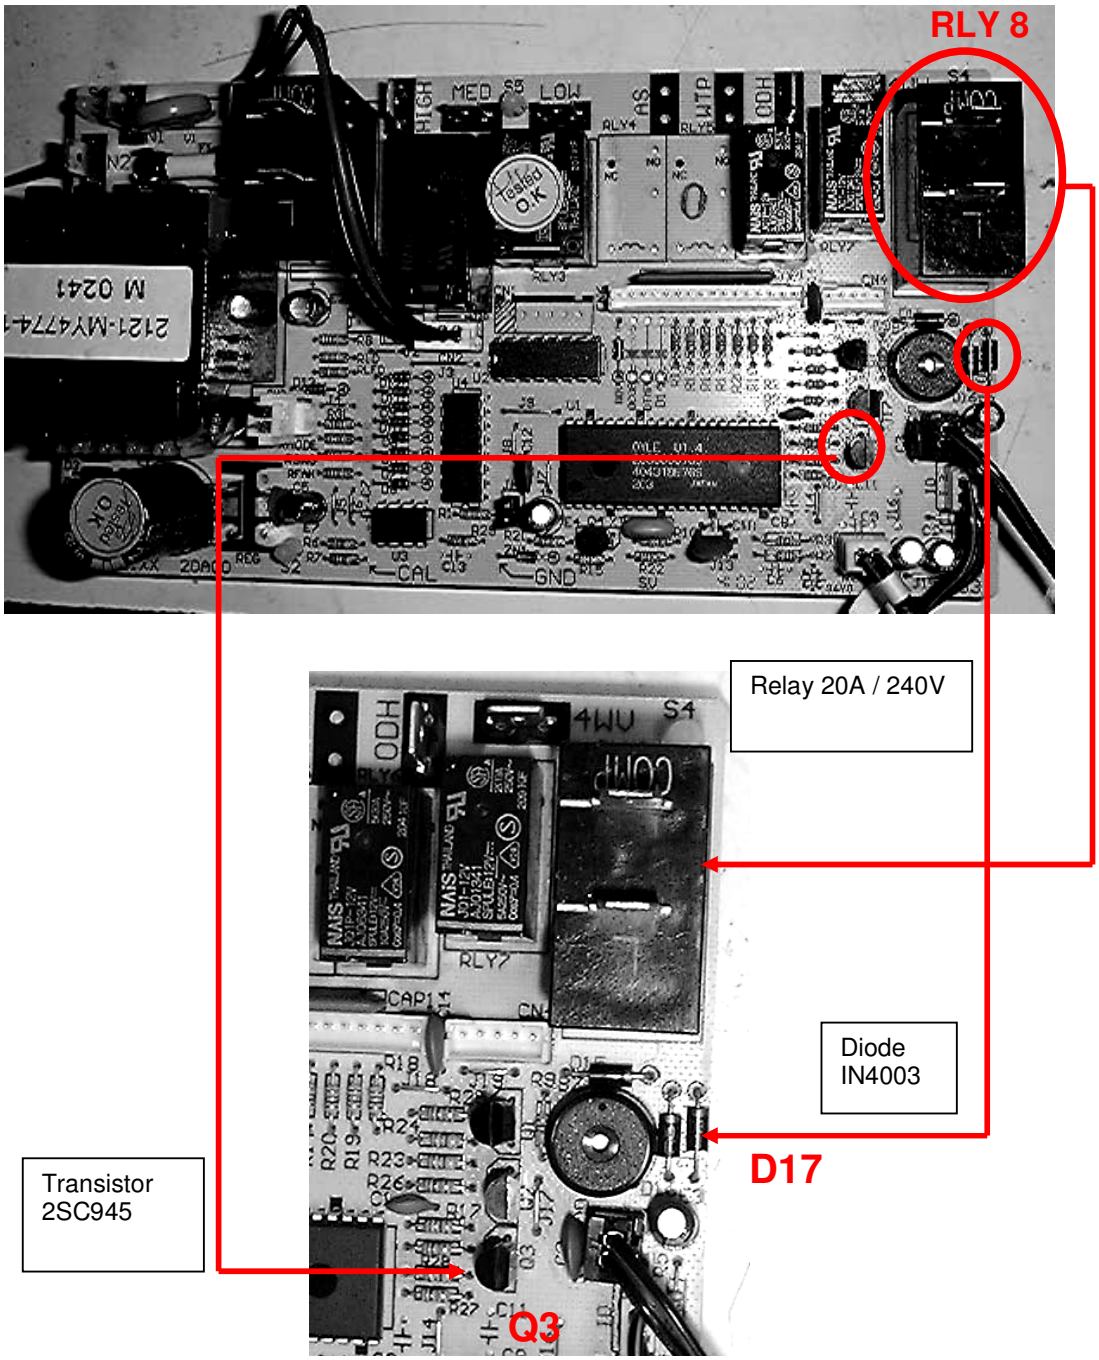
The above table is the summary of the jumpers setting for both LWS2.0 and L208A.
For example,
WSHP single compressor with Fan ON for hot keep selection:
Place the shunt jumpers on HT_KP (Pin 1 & 2) & MODEL (Pin 1& 2).

6.3 Auxiliary Heater Conversion

U1.5 Heatpump with Auxiliary Heater

To convert the standard U1.5 heatpump PCB to with auxiliary heater application, the following components need to be added onto the PCB.

1. Heater relay
2. Transistor
3. Diode

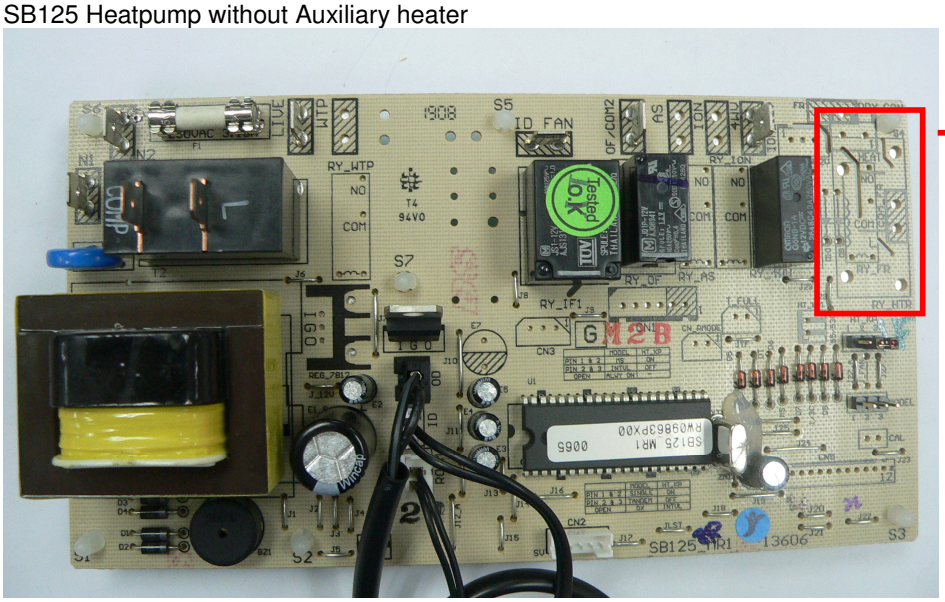


SB125 Heatpump with Auxiliary Heater

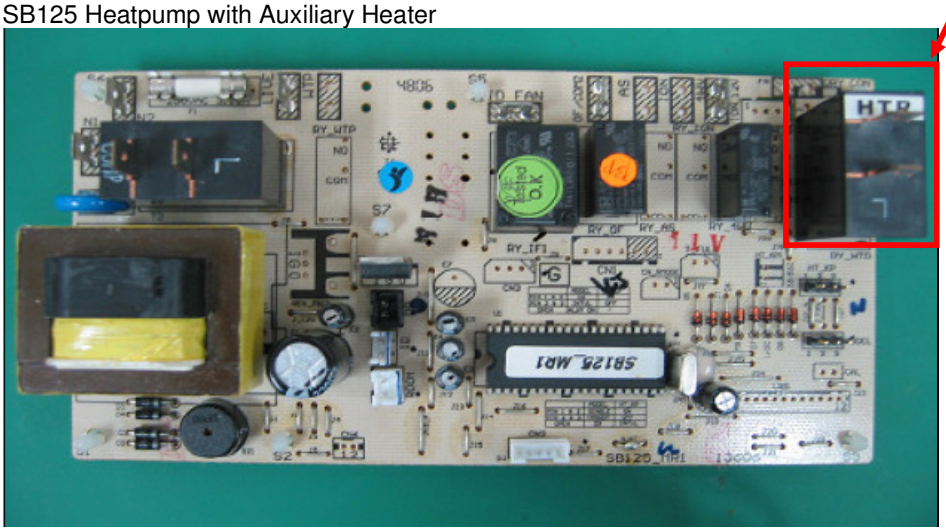
To convert SB125 heatpump PCB to auxiliary heater application, you need only one heater relay as shown below:

1. Place the JM relay on the RY_HTR location
2. Solder all the relay pins.

SB125 Heatpump without Auxiliary heater



SB125 Heatpump with Auxiliary Heater

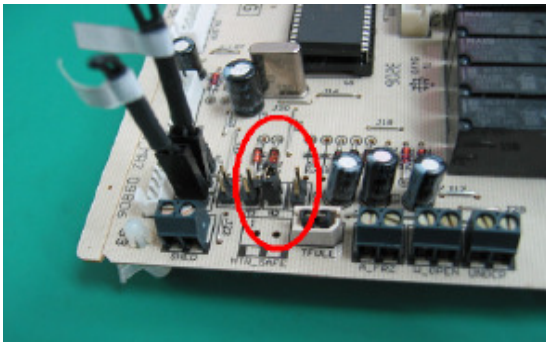


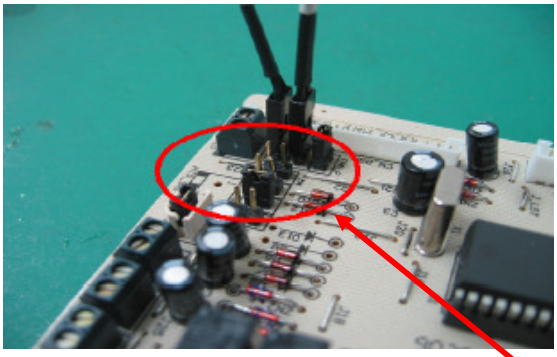
Relay
240V/ 20A

W2 Heatpump with Auxiliary heater

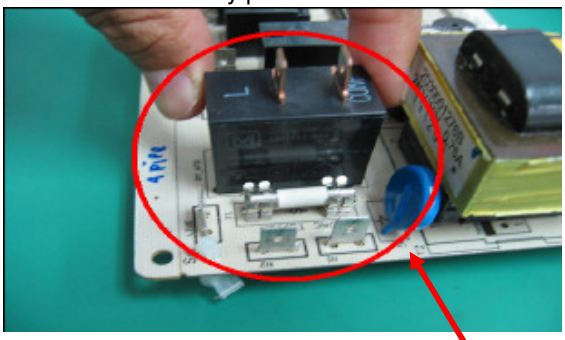
To convert SB125 heatpump PCB to auxiliary heater application, you need the following components to be added onto the PCB:
1. Shunt jumper
2. JM Relay 240VAC/ 20A

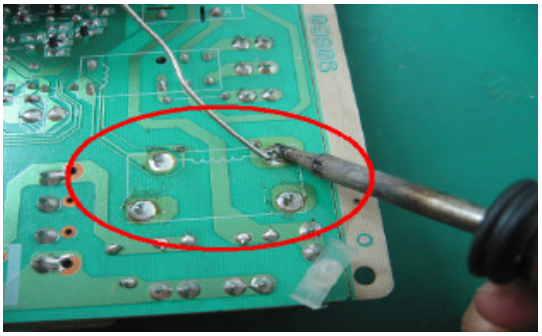
Step 1:-
Place the shunt jumper at jumper header M2.



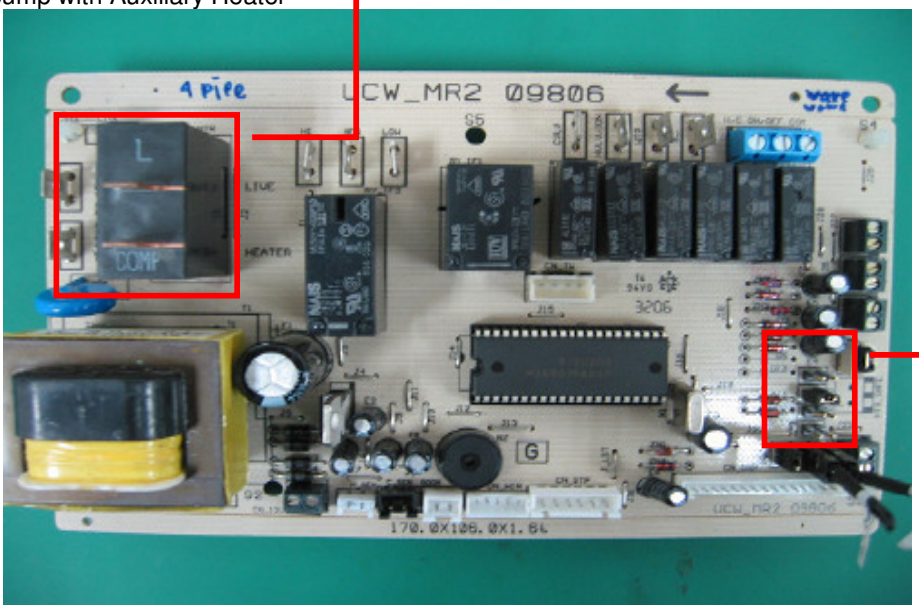


Step 2:-
1. Place the JM relay at RY_HTR location
2. Solder all the relay pins





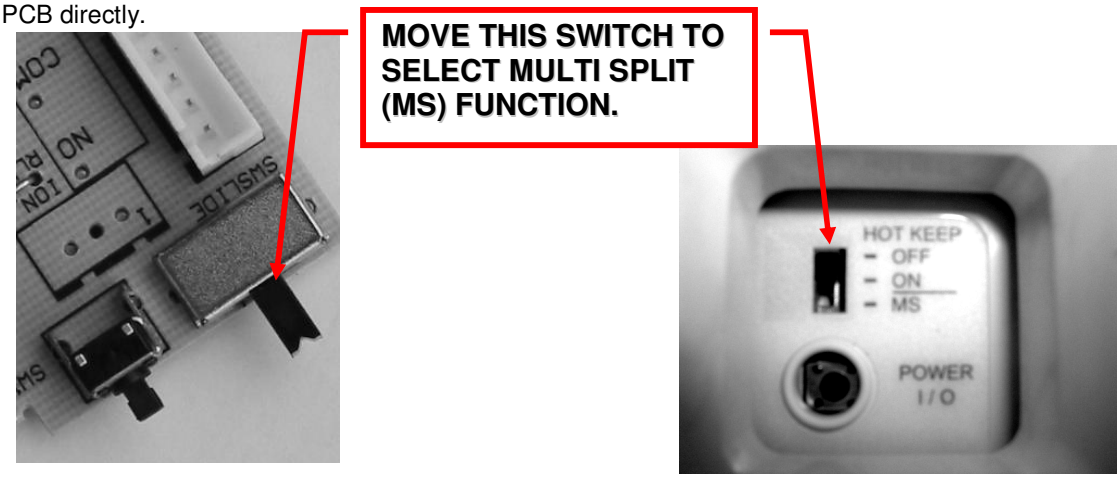
W2 Heatpump with Auxiliary Heater



6.4 Multi Split Conversion

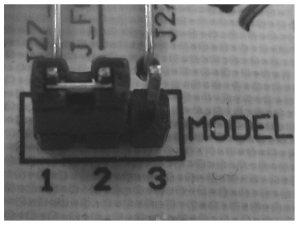
Cooling Only Model (L2.0 / L208A)
The cooling only model WM-G, CK-A/B/C/E, CE-E, CC-C which are using L2 control board can be switched to multi split units without any modification needed.

Heatpump Model (L2.0)
WM-GR
The Multi Split mode can be selected at the slide switch on the On/Off Switch Board; Preset at OFF.
The outdoor coil sensor has to be removed from the PCB as the reading is taken from the outdoor PCB directly.



Heatpump Models (L208A)
CK-AR/BR/CR/ER, CE-ER, CC-CR (L208A)

The multisplit can be selected by using shunt jumper and short jumper header MODEL_KP between pin 1 & 2 as the picture shown below. The outdoor coil sensor has to be removed from the PCB as the reading is taken from the outdoor PCB directly.



6.5 Sequential Controller

It is allowed to configure the controller to suit individual's need with details below:

1. Models
For each type, there are 3 models for the control to configure into.

	Dip switch 1	Dip switch 2	Dip switch 5
a. Cooling (SQCn)	Off	Off	Off
b. Heatpump + no heater (SQHn0)	On	Off	Off
c. Heatpump + 1 heater (SQHn1)	Off	On	Off
d. Heatpump + 2 heater (SQHn2)	On	On	Off
e. Auto heatpump + no heater (SQHn0)	On	Off	On
f. Auto heatpump + 1 heater (SQHn1)	Off	On	On
g. Auto heatpump + 2 heater (SQHn2)	On	On	On

n denotes number of compressor(s)
where the postfix number indicates number of compressor(s).

2. Stage Differential Temperature
Differential temperature is the temperature difference between turning on or off 1 compressor to another compressor in thermostat cycle.
The stage differential temperature can be selected from the range shown below:

	Dip switch 3	Dip switch 4
a. Default	Off	Off
b. 0.5℃	On	Off
c. 1.0℃	Off	On
d. 1.5℃	On	On

Note that 1.5℃ only valid for 2 and 3 compressors model. For 4 compressors model, maximum allowed is 1.0℃.

The default differential temperature is base on number of compressor model, the setting is as below:

Model	Diff. Temperature
1 compressor	Not. Applicable
2 compressors	0.5℃
3 compressors	1.0℃
4 compressors	1.5℃

3. Hot Keep Option

	Dip switch 6
a. Fan off	Off
b. Fan on	On

45. Operating Modes
The system has 4 operating modes to select with respect to each model selection:

Model	Auto	Cool	Heat	Fan	
SQCn	-	X	-	X	
SQHnh	-	X	X	X	(Dip switch 5 = off)
SQHnh	X	X	X	X	(Dip switch 5 = on)

Where x denotes modes available
n = number of compressor(s)
h = number of heater(s)

5. Last Memory Functions
The power up settings for either with or without the last memory backup is based on the J_LST setting.

	J_LST Setting
a. Last memory backup	J_LST Plugged
b. Without last memory backup	J_LST Removed

6. Summary of Models available

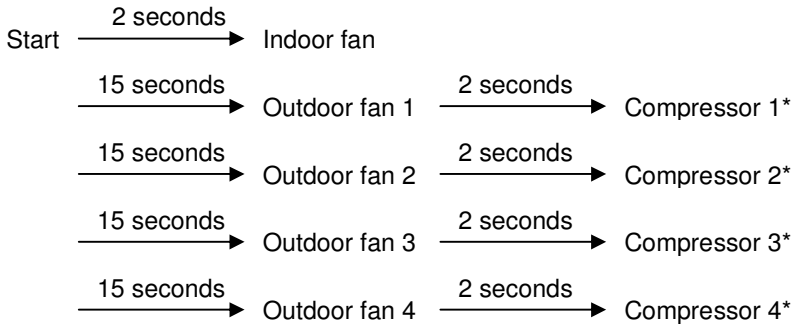
SQCn Cooling Only model
SQHnh Heatpump model

n = number of compressors: 2, 3, 4
h = number of heaters: 0, 1, 2

Factory preset (default setting)

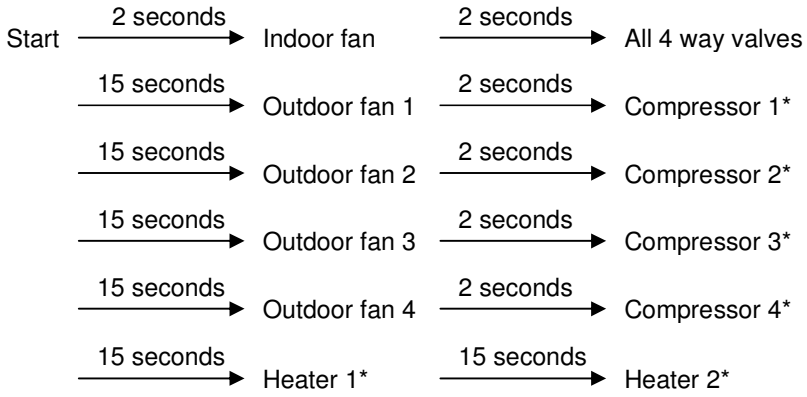
Model	SW1	SW2	SW3	SW4	SW5	SW6	SW7	SW8
SQCn	OFF	OFF	OFF	OFF	OFF	OFF	OFF	OFF
SQHnh	ON	ON	OFF	OFF	ON	ON	OFF	ON

7. Sequential Control for Cool Mode ask Tan CS
The starting sequence for indoor fan, outdoor fan and compressors is shown as below:



*If available and applicable
The compressors will be turned on one by one depending on the on/off conditions shown in the above.

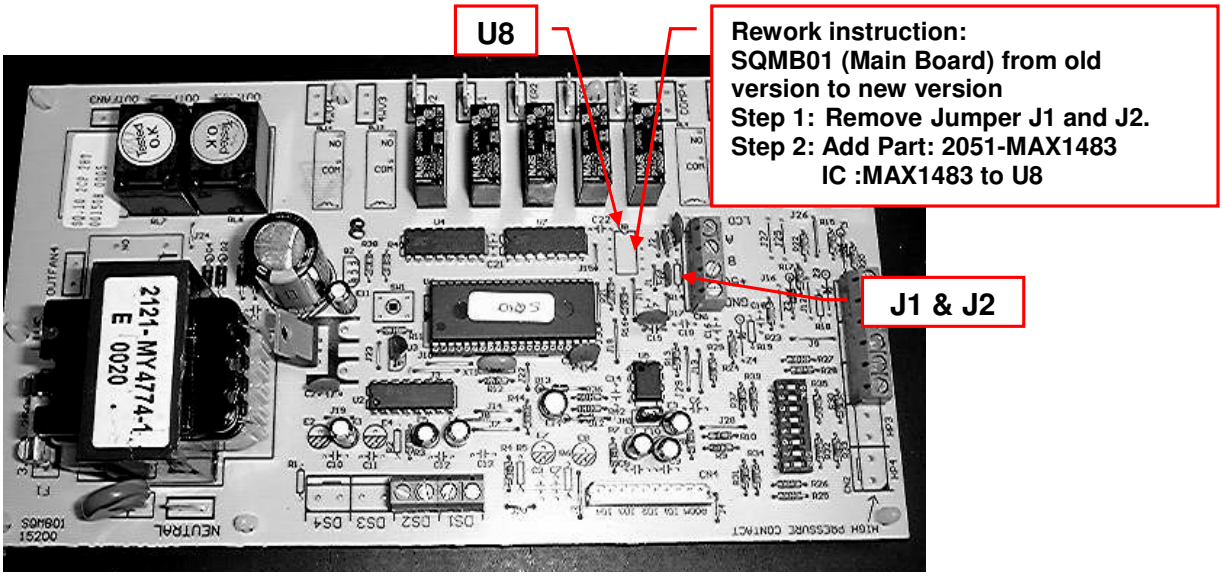
8. Sequential Control for Heat Mode
The starting sequence for indoor fan, outdoor fan and compressors is shown as below:



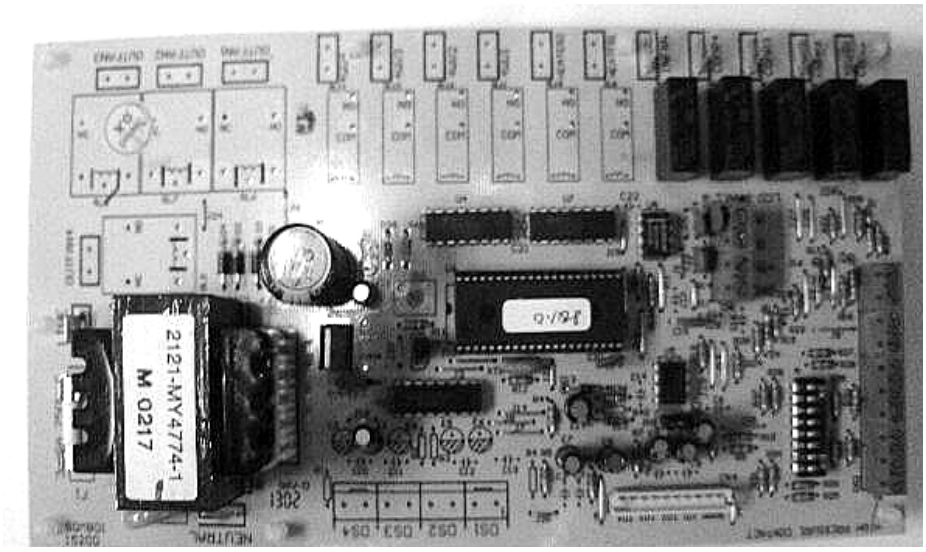
*If available and applicable
The compressors will be turned on one by one depending on the on/off conditions shown in the above.

9. Conversion from Old Sequential Board to New Sequential Board
(For wiring up to 1000 meters)

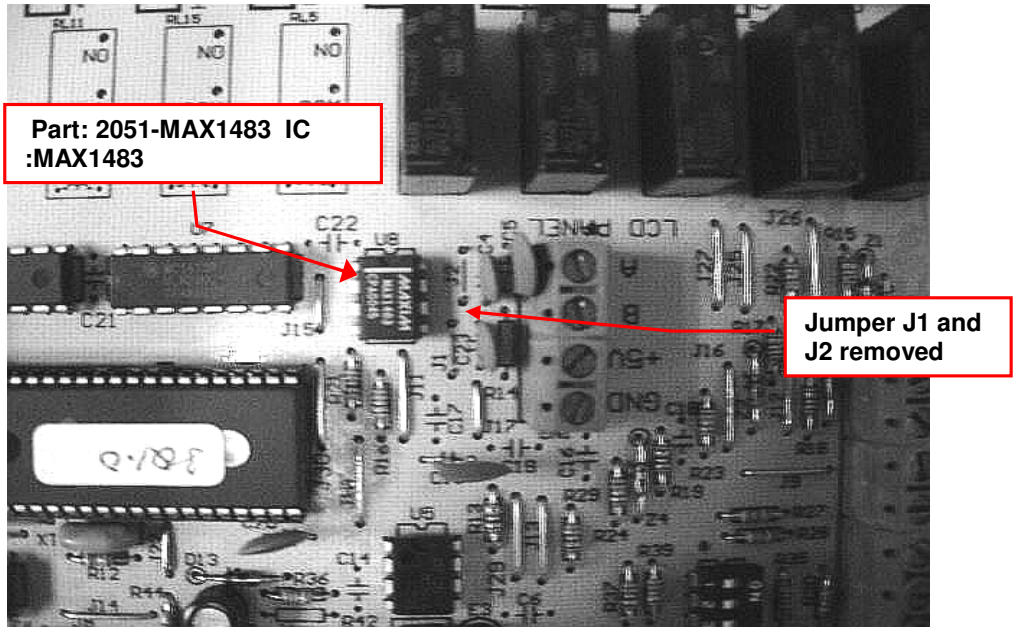
9.1 Sequential Main Board SQMB01 (Old Version)



9.2 Sequential Main Board SQMB01 (New Version)

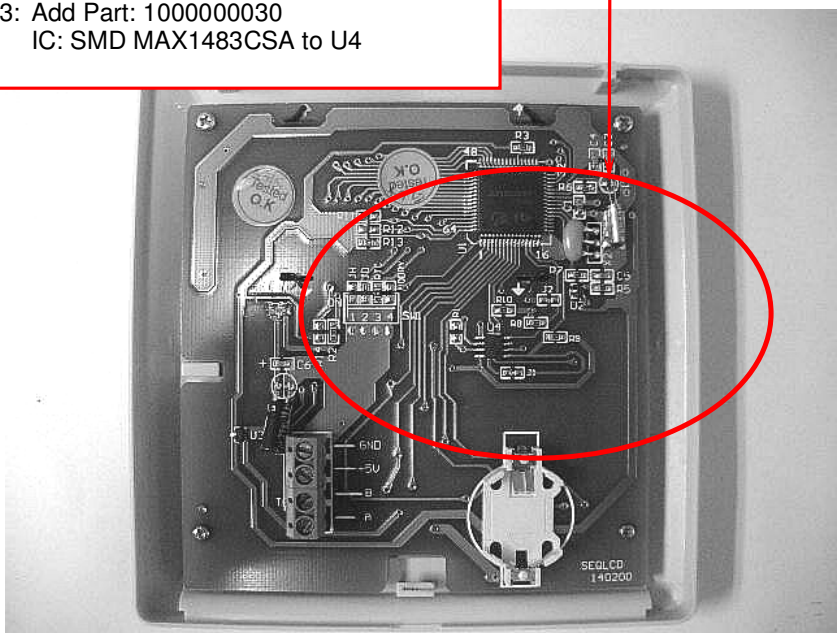


9.3 Sequential Main Board SQMB01 (New Version)



9.4 Sequential LCD Panel SQ-LCD (New Version)

SQLCD (LCD Panel) from old to new
Step 1: Remove Jumper: J1, J2
Step 2: Add Chip Resistor. 1/10W 5% 200K to R8, R9, R10
Step 3: Add Part: 1000000030
IC: SMD MAX1483CSA to U4



6.6 Chilled Water Fan Coil Unit (W1V3)

The standard W1V3 board comes with a VALVE jumper. The system can be configured as the jumper selection listed below:

	VALVE jumper	HEAT jumper
Heatpump Mode & Valve Application	√	√
Heatpump Mode & Valveless Application	X	√
Cooling Mode & Valve Application	√	X
Cooling Mode & Valveless Application	X	X

√ : Jumper Remained X : Jumper Removed

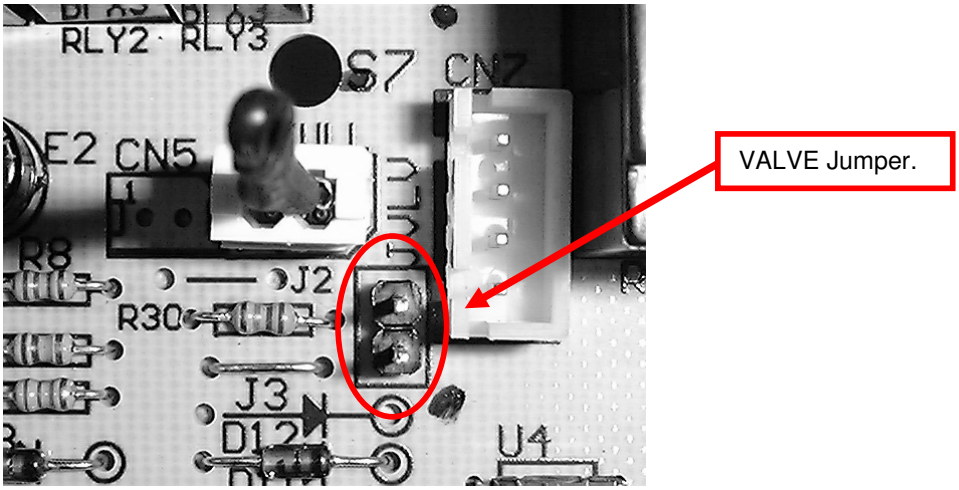
VALVE & HEAT Jumper Location

Model: WM 05-25FW

1. VALVE jumper is plugged into JVLV connector on the emergency switchboard.
2. HEAT jumper is plugged into JMODE connector on the emergency switchboard.

Model: CK 20-50AW, CK 15-25BW, CK 10-20CW, CE 20-50DW and CC 10-60CW

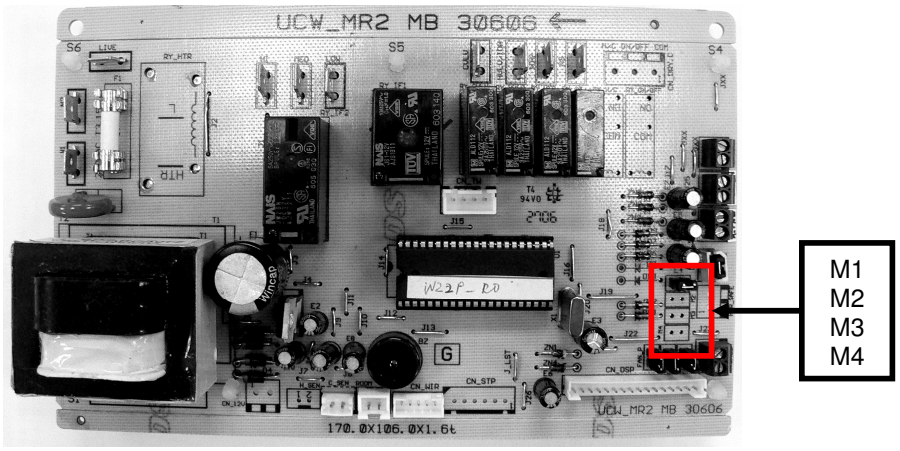
1. VALVE jumper is plugged into JVLV connector on the main board.
2. HEAT jumper is plugged into the OD connector on the main board.



6.7 Chilled Water Fan Coil Unit (W2.0)

The system model can be configured via the following jumpers. For each model selected, the permissible operating modes are as follows:

Jumper	Configuration	Model	Operating Modes
M1	2 Pipes without Aux. Heater	1	Heat>Cool>Dry>Fan
M2	2 Pipes with Aux. Heater	2	Heat>Cool>Dry>Fan
M3	4 Pipes + Boiler	3	Heat>Cool>Dry>Auto>Fan
M4	4 Pipes + Boiler	4	Heat>Cool>Dry>Fan



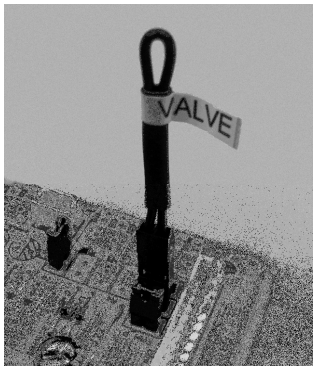
The standard W2 board comes with a VALVE jumper. The system can be configured as the jumper selection listed below:

	VALVE jumper	HEAT jumper
Heatpump Mode & Valve Application	√	√
Heatpump Mode & Valveless Application	X	√
Cooling Mode & Valve Application	√	X
Cooling Mode & Valveless Application	X	X

√ : Jumper Remained X : Jumper Removed

VALVE & HEAT Jumper Location

1. VALVE jumper is plugged into JVLV connector on the emergency switchboard.
2. HEAT jumper is plugged into JMODE connector on the emergency switchboard.



6.8 U1.5 → L208A Conversion

All single split indoor units with U1.5 PCB cannot be directly by the new L208A PCB because of the following:-

ACK/A5CK-A/AR & ACK/A5CK-C/CR

U1.5PCB - The connector on the PCB (CN6) for the inter-connector cable has 16 pins.
L208A PCB - The connector on the PCB (CN5 & CN6) for the inter-connector cable have 12 & 2 pins.

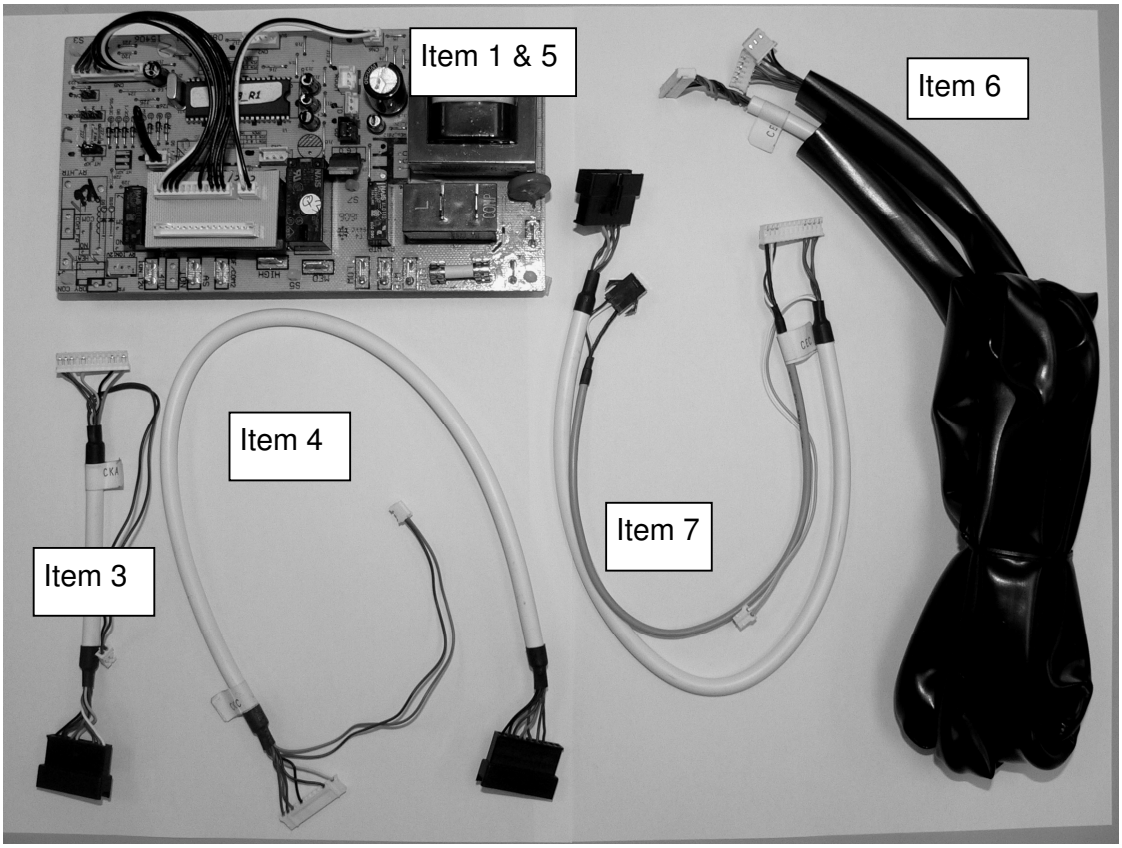
ACM/A5CM-D/DR & ACM/A5CM 062C/CR

U1.5 PCB - The connector on the PCB (CN6) for the assy. LED cable has 16 pins
L2 08A PCB - The connector on the PCB (CN5) for the assy. LED cable has 12 pins.

L2 Spare parts can be ordered via e-Distributors website under Spare Parts Ordering. The part number is PI-C-00094.

The L2 Spare Parts Package contains the following items:-
1. L2 08A Heat Pump PCB.
2. Room sensor, indoor coil sensor inter-connector wire, outdoor coil sensor inter-connector wire.
3. Inter-connector cable from main board to MCK-A/AR panel.
4. Inter-connector cable from main board to MCK-C/CR panel.
5. Intermediate board with 2 sets of cables, which is stick on the main board.
6. Inter-connector cable from main board to MCM-D/DR assy. LED board.
7. Inter-connector cable from main board to MCM 062C/CR assy. LED board.

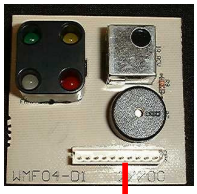
Remarks
The intermediate board with 2 sets of cables, which is stick on the L208A PCB (Item 1 & 5) is ONLY applicable for ACM/A5CM-D/DR and ACM 062C/CR models with originally using U1.5 PCB.

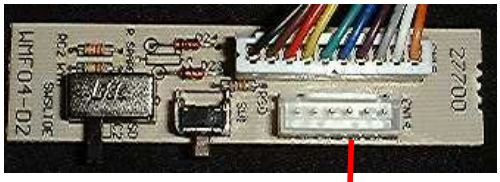


6.9 WMF U1.4 to L2EF Conversion

1. The U1.4 PCB can be replaced directly by the new L2EF PCB because no modification needs to be done and the connector pins for both stepper motor and fan motor is still the same as U1.4.
3. However, the display panel (IR receiver) and On/Off switch board pins on PCB for both U1.4 and L2EF is not compatible with each other; therefore it is unable to change only the display panel or On/Off switch board from U1.4 to L2EF or L2EF to U1.4.
5. For example, if the display panel for U1.4 is malfunction, it cannot be replaced by the display panel from L2EF as the connector pins is already different.
   Please refer to the following pictures for a clear description of connector pins.

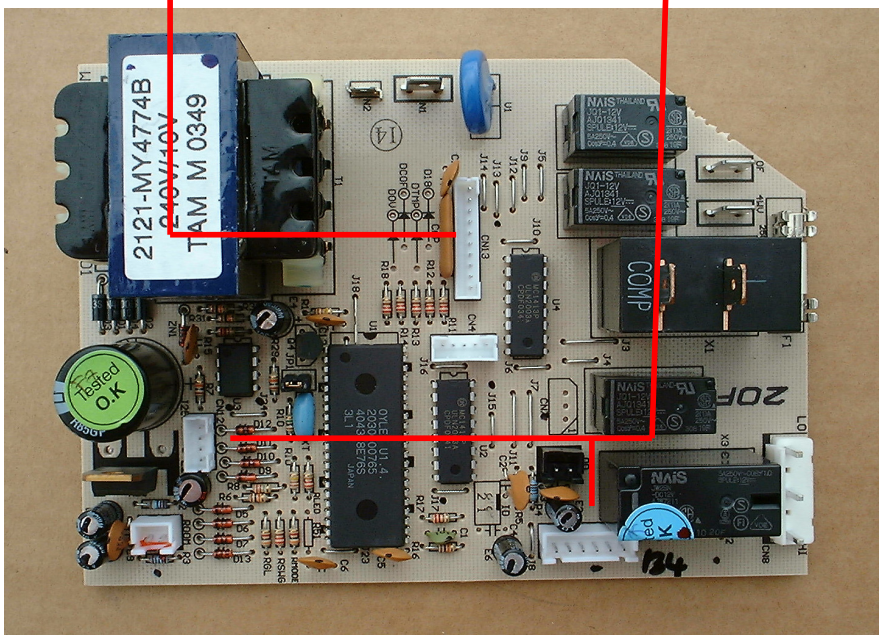
Display Panel





ON/ OFF switch board

U1.4 PCB



L2EF PCB
comes with display panel and ON/OFF switch board

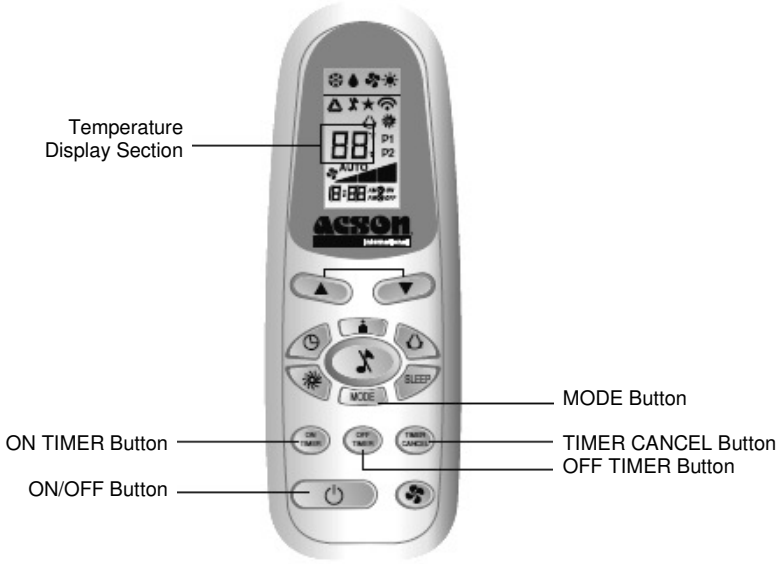
Error Code Diagnosis by Wireless Handset G18



Diagnosis Step

1. Hold down TIMER CANCEL button for 5 seconds, a "00" indication flashes on the temperature display section.
2. Press TIMER CANCEL repeatedly until indoor buzzer produces a long beep. This indicates the error code, refers to Error Codes table and is displayed on the temperature display section.
3. A short beep or two consecutive beeps indicate non-corresponding error codes.
4. To cancel the error code display, hold down TIMER CANCEL button for 5 seconds. Alternatively, the code display will cancel itself if the button is not pressed for 1 minute.

A5LCY 30/40/50/60 DR	W_2_03A	G18

Error code diagnosis by Outdoor 7-segment Display

In the Y-series model, the 7-segment display section on the outdoor unit indicates the following:
1. Unit running parameters
2. Error codes

Unit Condition	Display on 7-segment
Unit in normal operating mode	1. Flashes the compressor running frequency for up to 30 minutes after first start-up/ tact switch is pressed. 2. Subsequently, press on the tact switch to return to the above display. 3. Flashes up to 11 running parameters when tact switch is pressed in the sequence corresponding to the parameter number (refer to Unit Running Parameter Table).
Unit is in fault	1. Flashes unit error code (similar to wireless handset) 2. Flashes up to 11 running parameters when tact switch is pressed in the sequence corresponding to the parameter number (refer to Unit Running Parameter Table).

Unit Running Parameter

Parameter Number	Parameter Description	Unit/ Range
00	Compressor actual rotation	r/s
01	Compressor target rotation	r/s
02	Dc bus voltage	VDC
03	Total current (x10)	A
04	Outdoor air temperature	℃
05	Outdoor heat exchanger temperature	℃
06	Compressor discharge temperature	℃
07	Outdoor heat sink temperature	℃
08	Indoor air temperature	℃
09	Indoor heat exchanger temperature	℃
10	EXV Opening	Pulse
11	Outdoor fan speed	W0-W6
12	Horse power	15: 1.5hp
13	Software Version (Production)	
14	Software version (development)	
15	3 minutes count up stop timer	
16	Communication stage	0-3
17	Indoor On/ Off	0-OFF, 1-ON
18	Delta D	
19	Running mode	0-Fan, 1-Heat, 2-Cool
20	Start up timer	
21	Comp initial control flag ok	
22	Fuzzy control Delta H	
23	Comp freq set pointer	
24	Comp stop pointer	
25	Comp limit pointer	
26	Comp limit speed	Max r/s
27	Discharge high temp zone	0-Normal, Other-Active
28	High pressure zone	0-Normal, Other-Active
29	Current control zone	0-Normal, Other-Active
30	Oil return status	0-Normal, Other-Active
	Parameter Description	Unit/ Range

Parameter Number		
31	De-ice setting	0-Normal, Other-Active
32	Dew drop setting	0-Normal, Other-Active
33	Heat sink protection zone	0-Normal, Other-Active
34	Turbo setting	0-Normal, Other-Active
35	Silent setting	0-Normal, Other-Active
36	Low ambient zone	0-Normal, Other-Active
37	Defrost status	0-Normal, Other-Active
38	Pump down status	0-Normal, Other-Active
39	O/D output flag	0-Comp off, 1-Comp ON
40	O/D output capacity	In %
41	Target discharge temp	
42	EXV control status	0-Initial, 1-Feedback
43	Indoor fan tap	
44	O/D error code	
45	I/D error code	
46	Low voltage control zone	0-Normal, Other-Active
47	Gas leak detection	0-Normal, Other-Active
48	Discharge sensor disconnected	0-Normal, Other-Active
49	Official test setting	0-Normal, Other-Active
50	Skip frequency flag	0-Normal, Other-Active
51	Last O/D error code	
52	2nd last O/D error code	
53	3rd last O/D error code	

Error Code Diagnosis by Unit Last State Memory

1. Remove battery from remote controller
2. Replace battery again into remote controller
3. Press Mode & ON/OFF buttons together
4. Press Mode button to 5:00
5. Press ON/OFF once
6. Repeat the fault diagnosis steps by wireless handset G18

Multi Split Inverter – Y Outdoor Unit

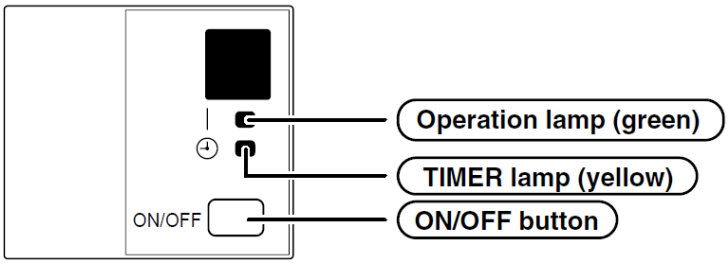
Wall Mounted K-Series Inverter-Y model

Model	Board	Handset
A5WMY 10/15 KR	2P206569-4	APJ2

Indoor LED Indication

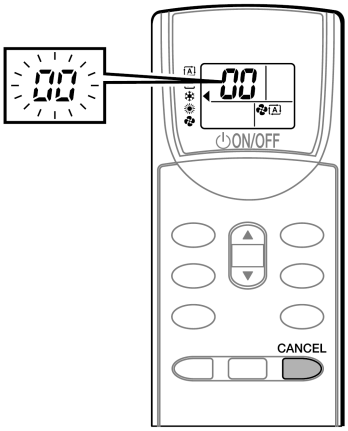


The operation lamp flashes when any of the following errors is detected.
1. When a protection device of the indoor or outdoor unit is activated or when the thermistor malfunctions, disabling equipment operation.
2. When a signal transmission error occurs between the indoor and outdoor units.

Error code diagnosis conducted by Wireless Handset APJ2

The wireless handset can receive a corresponding error code from the indoor unit.

1. When CANCEL is held down for 5 seconds, a "00" indication blinks on the temperature display section.
2. Press CANCEL repeatedly until a continuously beep is produced.



The code indication changes in the sequence shown below, and notifies with a long beep.

CATEGORY	CODE	DESCRIPTION
SYSTEM	00	NORMAL
	UA	INDOOR-OUTDOOR UNIT COMBINATION FAULT
	U0	REFRIGERANT SHORTAGE
	U2	DROP VOLTAGE OR MAIN CIRCUIT OVERVOLTAGE
	U4	FAILURE OF TRANSMISSION (BETWEEN INDOOR UNIT AND OUTDOOR UNIT)
INDOOR UNIT	A1	INDOOR PCB DEFECTIVENESS
	A5	HIGH PRESSURE CONTROL OR FREEZE-UP PROTECTOR
	A6	FAN MOTOR FAULT
	C4	FAULTY HEAT EXCHANGER TEMPERATURE SENSOR
	C9	FAULTY SUCTION AIR TEMPERATURE SENSOR

CATEGORY	CODE	DESCRIPTION
OUTDOOR UNIT	EA	COOLING-HEATING SWITCHING ERROR
	E1	CIRCUIT BOARD FAULT
	E5	OL STARTED
	E6	FAULTY COMPRESSOR START UP
	E7	DC FAN MOTOR FAULT
	E8	OVERCURRENT INPUT
	F3	HIGH TEMPERATURE DISCHARGE PPE CONTROL
	F6	HIGH PRESSRUE CONTROL (IN COOLING)
	H0	SENSOR FAULT
	H6	OPERATION FAULT DUE TO FAULTY POSITION DETECTION SENSOR

73	ER73	TH10 temperature sensor failure
74	ER74	TH11 temperature sensor failure
75	ER75	TH12 temperature sensor failure
76	ER76	Discharge pressure sensor failure
77	ER77	Suction pressure sensor failure
78	ER78	All indoor units Communication Failure

For item 0-47, the last two characters indicate which indoor has communication problem.

7.2 General Check

When any air conditioner malfunction is noted, immediately switch off the power supply to the unit and contact the local dealer if necessary.

Problem Symptom	Check Item	Suggested Action
The unit does not work	Check the power supply	Check to make sure that the rated voltage is supplied.
	Check the fuse	Check and replace the fuse.
	Check the remote controller timer setting	Make sure the delay timer is set correctly.
Fan does not work	Check the power supply	Check to make sure that the rated voltage is supplied.
	Check the fan motor capacitor	Check and replace the capacitor.
	Check the fan motor	Check and replace the fan motor.
	Check the switch	Check and change the switch.
Fan work, but compressor does not work	Check if the thermostat setting too high	Reset thermostat.
	Check the compressor capacitor	Check and replace the capacitor.
	Check the compressor	Check and replace the compressor.
	Check the compressor contactor	Check and replace the contactor.
Air conditioner work but cooling not satisfactory	Check if the thermostat setting too high	Reset thermostat.
	Check if the condenser coil dirty	Clean the condenser coil.
	Check the condenser installation condition	Make sure the condenser is installed according to factory's recommendation.
	Diagnosis by service port pressure and operating Current	Check for insufficient refrigerant.
The air flow is too low	Check the air filter	Check and make sure the air filter is clean.
	Check the fan / blower condition	Check and make sure that the fan / blower are in good condition.
The remote controller light is dim	Check the battery	Check and replace the battery.
		Make sure the batteries are correctly inserted.

7.3 General Troubleshooting Guide

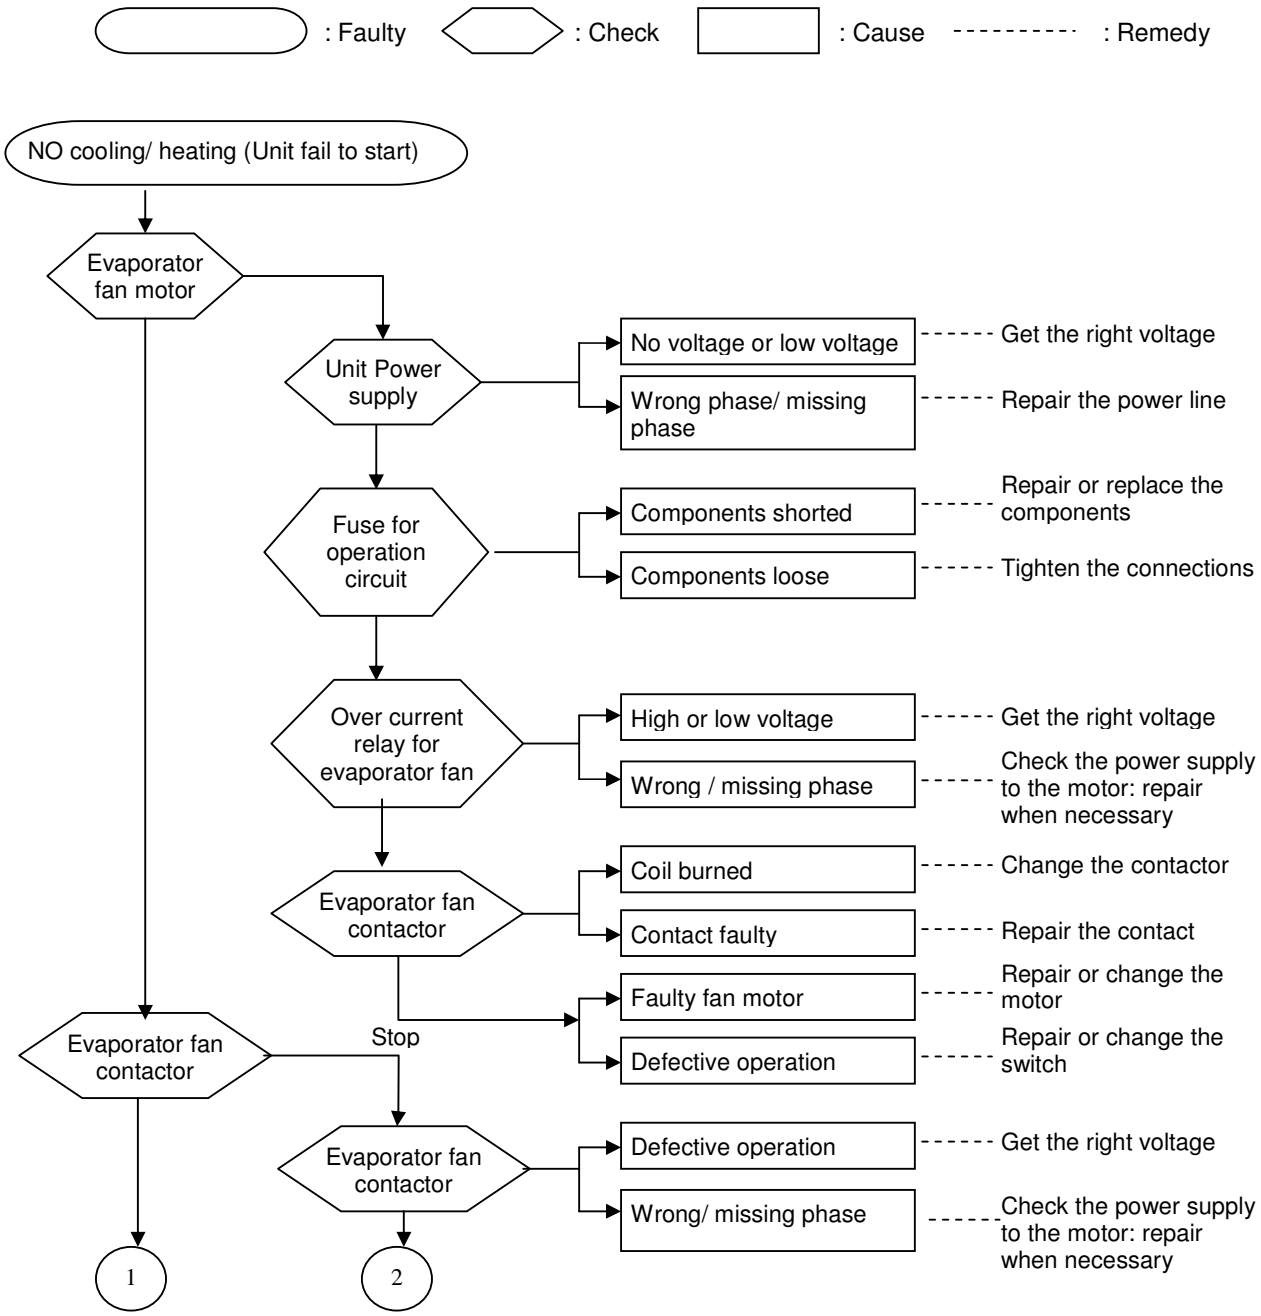
By means of pressure readings.

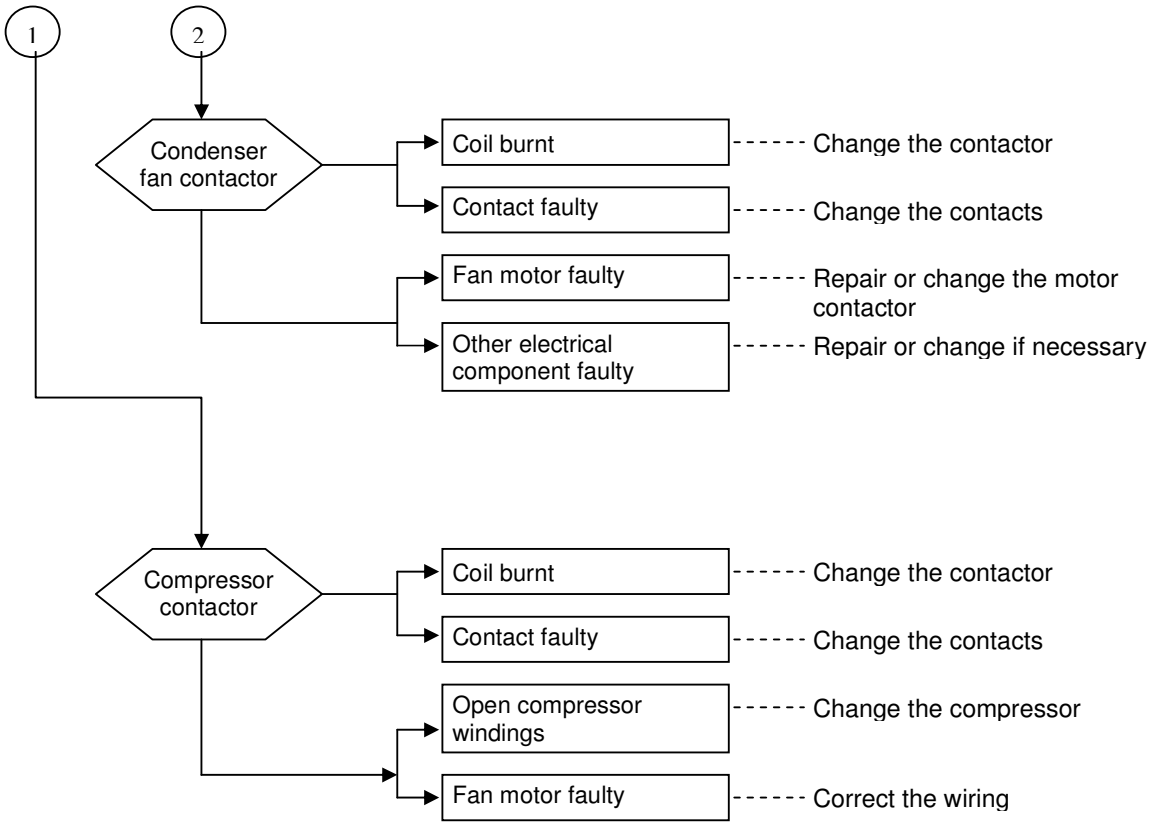
Pressure						Probable Cause
Data / Circuit	Too Low	A Little Low	Normal	A Little High	Too High	
High Side Low Side					● ●	1. Overcharged with refrigerant. 2. Non-condensable gases in refrigerant circuit (eg. Oil) 3. Obstructed air-intake / discharge. 4. Short circuit of hot air at condensing unit.
High Side Low Side	●				●	1. Poor compression / no compression (compressor defective). 2. Check valve stick in open position. 3. Reversing valve leaking (for heatpump only).
High Side Low Side	●	●				1. Undercharged with refrigerant. 2. Refrigerant leakage. 3. Air filter clogged / dirty (indoor unit). 4. Indoor fan locked (cooling). 5. Defective defrosts control, outdoor coil freeze up (heating). 6. Outdoor fan locked (heating).
High Side Low Side				●	●	1. Outdoor fan blocked (cooling). 2. Outdoor coil dirty (cooling). 3. Indoor fan locked (heating). 4. Indoor filter clogged dirty (heating).
High Side Low Side				●	●	1. Air intake temperature of indoor unit too high.

By means of diagnostic flows chart:

Generally, there are two kinds of problems, i.e. starting failure and insufficient cooling/ heating. "Starting failure" is caused by electrical defect while improper application or defects in refrigerant circuit causes "insufficient cooling/ heating".

i) Diagnosis of Electric circuit



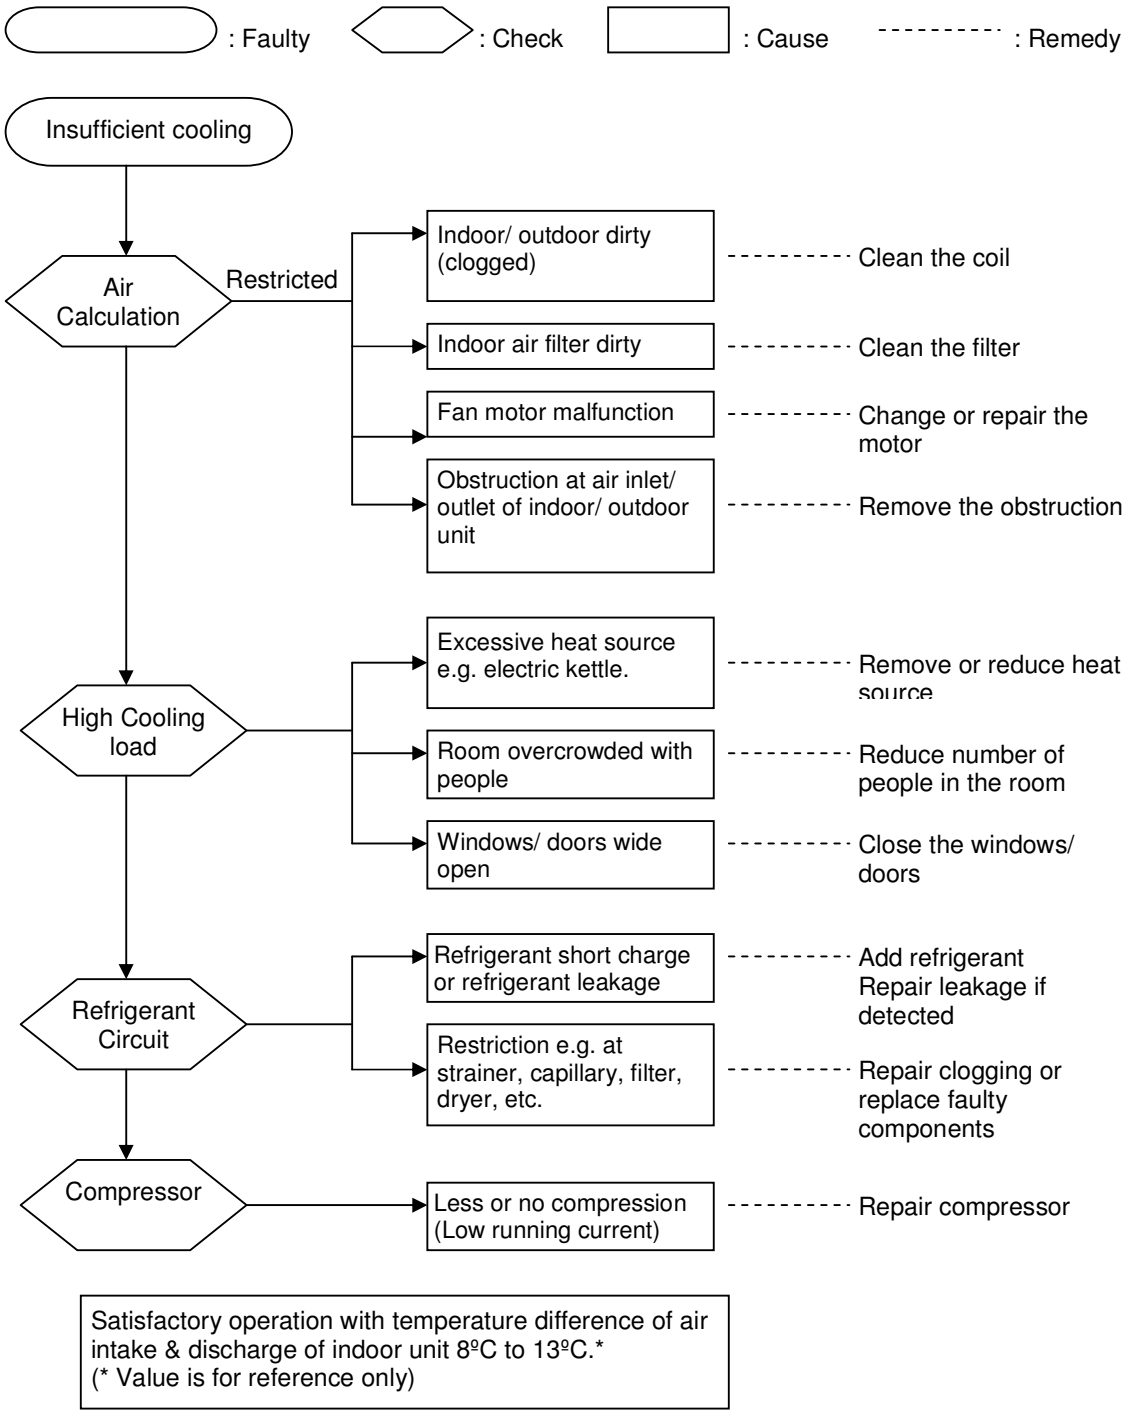


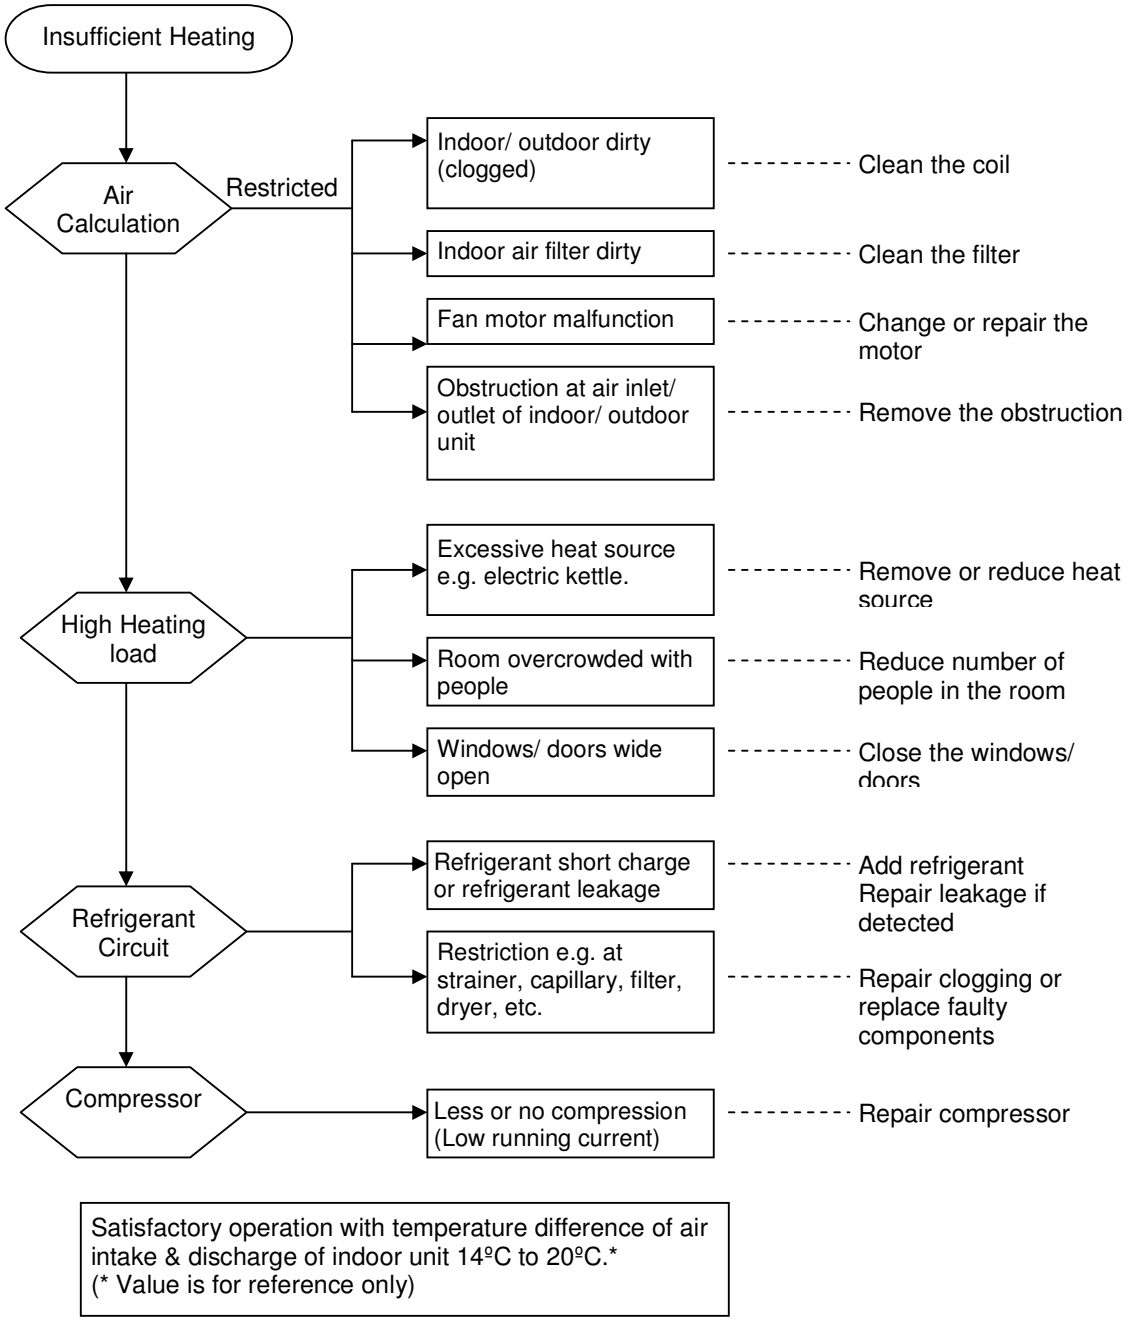
The most common causes of air conditioner failure to 'start' are:

a) Voltage not within ± 10% of the rated voltage.
b) Power supply interrupted
c) Improper control settings
d) Air conditioner is disconnected from main power source
e) Fuse blown or circuit breaker off.

ii) Diagnosis of Refrigerant Circuit/ Application

There might be some causes where the unit starts to run but does not perform satisfactorily, i.e. insufficient cooling. Judgement could be made by measuring temperature difference of indoor unit's intake and discharge air as well as running current.





Mini Chiller: Troubleshooting Guide

When any malfunction is occurred, immediately switch off the power supply to the unit, and contact the local dealer, if necessary. Some simple troubleshooting tips are given below:

Symptoms	Possible Causes	Remedial Action
1. Compressor does not start	• No power supply • Fuses blown or automatic circuit breakdown open • Defective contactor or coil • Unit is stopped because a safety has tripped • Loose wires • Compressor faulty	• Check power supply • Look for short circuit or grounded wires in motor windings Replace fuses and reset circuit breakers when the fault has been corrected Check tightness and soundness of all electrical connection • Repair or replace • Determine the type of safety shut down and correct the unit is restarted • Check wire connection and tighten terminal screw • Contact local dealer
2. Fan does not start	• No power supply • Fan motor faulty	• Check power supply • Contact local dealer
3. Air conditioning does work, but insufficient cooling	• Thermostat setting too high • Condenser coil dirty • Obstacle blocking air inlet or outlet of the unit • Insufficient refrigerant in the system • Improper water flow rate • Water in the system is contaminated	• Reset thermostat • Contact local dealer • Remove the obstacle • Contact local dealer • Contact local dealer • Contact local dealer

Rooftop: Troubleshooting Guide

Before you ask for repair service, check the following points

Symptoms	Switch Box (Field Supply)	Possible Causes	Troubleshooting
It does not run	Switch (ON)	• Power failure • The power supply is turned OFF • The fuse in the power supply is gone • The earth leakage breaker is gone • The wiring phase of power supply is mistaken	• Press the switch (ON) button after power restoration. • Turn the power supply ON • Replace the fuse • Put in the earth leakage breaker • Modify the wiring phase of power supply
Air flow out but it does not cool enough	Switch (ON)	• Improper temperature adjustment • The filter is filled with dust and dirt • There are some obstacles at the air inlet and outlet of the units • Windows and doors are open	• After checking the set temperature and inlet temperature adjust thermostat (23WA) • Clean the filter • Remove the obstacle • Close the windows and doors
Cool air does not come out	Switch (ON)	• The restart-preventing circuit is in operation for 3 minutes	• Wait for a while (to protect the compressor, a 3 minutes restart-preventing circuit is built into the unit. Therefore, there are occasions sometimes when the compressor does not start running immediately. There are cases when it does not run for as long as 3 minutes)
Fan runs but compressor does not run		• The set temperature of thermostat is too high • The room temperature is excessively low for cooling	• For temperature control, decrease the set temperature at cooling • Can not be operated as it is out of temperature control range
Compressor run but stops immediately		• Air outlet and inlet are blocked	• Remove blocking matter
Water or steam is discharged from the unit		• At cooling, water which places to cooling piping and piping connection part drops	• It is not a breakdown. Please use it as it is
